# BIBLIOGRAPHY OF AGRICULTURE

Vol. 33

January 1969

1080

No. 1

The Bibliography of Agriculture is an index to the literature of agriculture and the allied sciences received in the National Agricultural Library. Publications from any country are indexed, provided they are in one of the languages shown in CAPITALS at top of next column, or have summaries, abstracts, or translated titles in one of those languages.

Literature received more than one year after publication is generally not indexed. Exceptions are made for important scientific publications.

Indexing of articles on the processing of agricultural products is limited to those on primary processing.

Unsigned articles and those signed with pseudonyms or initials, editorials, letters to the editor, and columns appearing regularly, are omitted.

For more detailed coverage of the literature on pests and their control, please consult the Pesticides Documentation Bulletin, a biweekly publication of the National Agricultural Library.

## FORMAT

The Bibliography is a classified arrangement of references under the following subjects:

USDA Publications

State Agricultural Experiment Station Publications

State Agricultural Extension Service Publications

Agricultural Economics and Rural Sociology

Agricultural Products

Animal Industry

Engineering

Entomology

Food and Human Nutrition

Forestry

Plant Science

Soils and Fertilizers

Miscellaneous

The classified section is followed by the listing of:

New Periodicals and Serials

Translations

Food and Agriculture Organization of the United Nations (FAO) Publications

The last section of each monthly issue, except November, is the Author and Subject index for that issue.

For monographs the title is shown in the original language, followed by the English version. Titles of foreign language articles in serial publications are given in English only; the language of the text is shown in abbreviated form in parentheses at the end of the title. The following notations are used:

(Af)	Afrikaans	(Ic)	Icelandic
(Al)	Albanian	(In)	Indonesian
(Ara)	Arabic	(It)	ITALIAN
(Arm)	Armenian	(Ja)	JAPANESE
(Az)	Azerbaijani	(Ka)	Kazakh
(Be)	Belorussian	(Ko)	KOREAN
(Bu)	Bulgarian	(La)	Latvian
(Bur)	Burmese	(Li)	Lithuanian
(Ch)	CHINESE	(No)	NORWEGIAN
(Cz)	CZECH	(Pe)	Persian
(Da)	DANISH	(Pol)	POLISH
(Du)	DUTCH	(Por)	PORTUGUESE
(Es)	Estonian	(Rum)	Rumanian
(Fi)	Finnish	(Rus)	RUSSIAN
(Fl)	Flemish	(Se)	SERBO-CROATIAN
(Fr)	FRENCH	(Si)	Siamese
(Ge)	GERMAN	(Sl)	Slovenian
(Geo)	Georgian	(Sp)	SPANISH
(Gre)	GREEK	(Sw)	SWEDISH
(He)	Hebrew	(Ta)	Tadzhik
		(Tu)	TURKISH
(Hu)	HUNGARIAN	(Uk)	UKRAINIAN

Abbreviated names of the publications cited prior to July 1, 1964 are those from USDA Miscellaneous Publication 765—List of Serials Currently Received in the Library of the United States Department of Agriculture, July 1, 1957. Abbreviated names of all new periodical titles received after July 1, 1964, are taken from the American Standard for Periodical Title Abbreviations. As time allows, abbreviations set up for titles before that date will be converted to the new form.

The presence of the term "Ref." in the citation indicates that the article contains ten or more references to the literature.

Following each citation is the Library classification number which should be used when requesting loans or reproduction of articles.

## FREQUENCY OF PUBLICATION

The Bibliography is published monthly. The December issue is devoted wholly to a subject index and the cumulated Personal and Organizational index to the preceding eleven issues.

## AVAILABILITY OF REFERENCES CITED

### Loans

Most of the material in the National Agricultural Library collection may be borrowed by employees of the Department of Agriculture and by other libraries. In requesting loans, please include the library call number found at the end of the citation. Loan of periodicals is restricted to the Washington, D. C. area. Foreign statistical publications and rare books are loaned only by special arrangement.

### Free Distribution

U.S.D.A. publications. Domestic requests for publications of the United States Department of Agriculture will be filled free to libraries and other qualified agencies and organizations, as long as the supply lasts. (For ordering information, see Checklist of U.S.D.A. Publications in this issue.) Foreign institutions, organizations and agencies which issue publications may obtain U.S.D.A. publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange Unit, Washington, D. C., 20250.

State Agricultural Experiment Station and Extension Service publications. Publications issued by State Agricultural Experiment Stations and Extension Services are available except where noted, and as long as the supply lasts, from the issuing station or service. The National Agricultural Library does not distribute them; however, reproductions are available at regular Library rates.

### Technical Reports

Citations listed with the annotation "CFSTI" followed by price are also available for purchase from the Clearinghouse for Federal Scientific and Technical Information, U. S. Department of Commerce, Springfield, Virginia, 22151.

## Reproduction

All articles listed may be obtained in microfilm or photoprint form from the United States Department of Agriculture, National Agricultural Library, Photoduplication Section, Washington, D. C., 20250. Copying charges for each periodical or book are:

**MICROFILMS:** \$1.00 for each 30 pages or fraction copied from a single article or book.

**PHOTOPRINTS:** \$1.00 for each 4 pages or fraction copied from a single article or book.

**RUSH SERVICE:** Will be furnished upon payment of \$1.00 additional for each order.

Payment must accompany the order. Cash, Library coupons, check or money order drawn to the National Agricultural Library, U. S. D. A., are acceptable. Payment for orders originating outside of the United States should be made by international money order or draft on an American bank, or by UNESCO book coupons. Superintendent of Documents coupons and requests to furnish photocopy to be paid from Superintendent of Documents Deposit funds cannot be honored. Credit may be extended only to Government agencies and institutions. Billing address should be indicated.

### Library Coupons

National Agricultural Library coupons, valued at \$1.00 each, may be purchased in any quantity.

-----  
PLEASE GIVE COMPLETE BIBLIOGRAPHIC INFORMATION AS IT APPEARS IN THIS PUBLICATION FOR EACH ITEM REQUESTED.  
-----

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C., 20402  
\$26.50 per year, domestic; \$33.25 per year, foreign. Single copies vary in price.

Use of funds for printing this publication approved by the Director of the Bureau of the Budget (January 3, 1969).

## CHECKLISTS

Checklists of publications of the U. S. D. A., State Agricultural Experiment Stations, and State Agricultural Extension Services are prepared for the convenience of those who wish to follow the literature from these sources. All such publications are included also in the classified section and indexed in the author and subject indexes.

Abstracts are included with citations of U. S. D. A. publications, provided they are brief and are received with the original publication.

U. S. D. A. PUBLICATIONS

Publications in the various United States Department of Agriculture series are listed first, followed by publications issued by the various agencies within the Department, arranged alphabetically by name of agency.

Domestic requests for publications in the various Department series will be filled free to libraries and other qualified agencies and organizations upon application to the United States Department of Agriculture, Office of Information, Washington, D.C., 20250, as long as the supply lasts. They may also be purchased from the Superintendent of Documents, Washington, D.C., 20250.

Domestic requests for most publications issued by the Department will be filled free by the issuing agency, as long as the supply lasts. Requests should be addressed to the United States Department of Agriculture, name of the specific issuing agency, Washington, D.C., 20250.

Foreign governments, institutions and agencies which issue publications, may obtain United States Department of Agriculture publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange Unit, Washington, D.C., 20250.

For further information about the availability of United States Department of Agriculture publications, consult U.S.D.A. List Number 11, List of Available Publications of the United States Department of Agriculture, obtainable from the United States Department of Agriculture, Office of Information, Washington, D.C., 20250, and for sale by the Superintendent of Documents, Washington, D.C., 20402.

Farmers' Bulletins

- 19 Timmins, M. S. SAFE USE AND STORAGE OF FLAMMABLE LIQUIDS AND GASES ON THE FARM. U. S. D. A. Farmers' Bull. 2156,rev.,12 p. June 1968. 1 Ag84F  
Gasoline, kerosene, LP gas, and other petroleum products are dangerous. Careless use or improper storage of these flammable liquids and gasses can result in a serious fire or explosion.  
Every year, hundreds of persons die in such fires and explosions on farms; many more suffer serious injury; millions of dollars' worth of property is damaged or destroyed.  
You can greatly reduce the possibility of fire or explosion when using or storing flammable liquids or gases by observing proper precautions. You can further safe-guard life and property by maintaining suitable fire-fighting equipment on your farm.
- 20 U. S. Agricultural Research Serv. Animal Husbandry Research Div. SWINE PRODUCTION. U. S. D. A. Farmers' Bull. 2166,rev.,30 p. Apr.1968. 1 Ag84F

- 21 U. S. Agricultural Research Service. Crops Research Division. CONTROLLING TOMATO DISEASES. U. S. D. A. Farmers' Bull. 2200, slightly rev., 10 p. July 1968. 1 Ag84F

Some diseases that commonly affect tomatoes are fusarium wilt, verticillium wilt, damping-off, septoria leaf spot, gray leaf spot, early blight, late blight, bacterial spot, anthracnose, soil rot, blossom-end rot, and tobacco (tomato) mosaic.

Other disorders that commonly affect tomatoes are catface and 2,4-D injury.

Following are ways in which you can prevent or reduce losses from disease:

- Plant resistant varieties if they are available.
- Treat seed with a fungicide.
- Apply fungicides to foliage and fruit.
- Rotate crops.

- 22 Garver, H. L. PLUMBING FOR THE HOME AND FARMSTEAD. U. S. D. A. Farmers' Bull. 2213, slightly rev., 20 p. Mar. 1968. 1 Ag84F

Causes leaf rust on wheat.  
Summary, p. 17.
- 99 Puckett, H. B. PERFORMANCE OF SMALL HAMMER AND ROLLER MILLS FOR GRINDING LIVESTOCK FEED. U. S. D. A. Tech. Bull. 1394, 25 p. June 1968. 1 Ag84Te  
Although we can conclude that the power requirement of a roller mill grinding wet or dry corn, oats, or wheat generally increases as the grinding rate increases, the energy requirement per ton decreased in all these tests as the grinding rate increased. The energy requirement per ton also decreased with increased roller clearances. The modulus of fineness remained nearly constant as roller clearance was varied. However, the percentage of fines, which represented only a small part of the total, generally decreased with an increase in roller clearance. Grinding rate had practically no effect on size of particles or on percentage of fine materials.

- 192 Tarte, R. FIRST RECORD OF THE OCCURRENCE OF *HETERODERA ROSTOCHIENSIS* IN PANAMA. Plant Dis. Rep. 52(8):587-588, map. Aug. 1968. 1.9 P69P  
A population of the golden nematode of potato, *Heterodera rostochiensis* Wollenweber 1923, was discovered in August 1967 in the potato-growing region of Cerro Punta in the Republic of Panama.
- 193 Smiley, J. H., and Flowers, R. A. TOBACCO DISEASES IN KENTUCKY IN, 1967. Plant Dis. Rep. 52(8):589. Aug. 1968. 1.9 P69P  
Includes injuries.  
Low temperatures and above-normal rainfall prevailed in Kentucky during the spring and early summer of 1967. These conditions were favorable for development of certain tobacco diseases.
- 194 Bruehl, G. W. ECOLOGY OF CEPHALOSPORIUM [GRAMINEUM] STRIPE DISEASE OF WINTER WHEAT IN WASHINGTON. Plant Dis. Rep. 52(8):590-594, map. Ref. Aug. 1968. 1.9 P69P  
Cephalosporium stripe disease of winter wheat, incited by *Cephalosporium gramineum*, is most prevalent in Washington in soil sites having high water content during late fall and winter. Stripe is most common in the higher, subhumid periphery of the Washington wheat area, the region with greatest rainfall. It is rare or absent in the warmer, drier, better drained soils. Excessive soil and surface water from October through December favors development of the Hymenulata stage of the pathogen, sporulation, dispersal of spores, root injuries from heaving soil, and thus ingress of the pathogen into wheat roots. Above normal precipitation in November and December was associated with disease severity.  
The occurrence of *Cephalosporium* stripe in scattered ecological niches indicates that the pathogen is not a recent introduction into the region, and that the large uninfested central wheat area is ecologically inhospitable to the pathogen.  
A lack of adequate rotation and early seeding favor the disease.
- 195 Nariani, T. K. ENATION LEAF CURL OF TOMATO. Plant Dis. Rep. 52(8):595-596. Aug. 1968. 1.9 P69P  
A leaf curl disease of tomato characterized by curling, twisting and rolling of leaves and accompanied by dark green enations on the veins on the undersurface of the leaflets was found to be graft-transmissible. The causal virus, which was transmitted by the sweetpotato whitefly (*Bemisia tabaci* (Gen.), was transmissible to tobacco, *Datura stramonium*, and *Capsicum annuum* and is considered to be a strain of tobacco leaf curl virus (*Nicotiana virus 10*).
- 196 Koenigs, J. W. CONTROL OF FUSIFORM RUST ON SOUTHERN PINES IN NURSERIES. Plant Dis. Rep. 52(8):597-599. Ref. Aug. 1968. 1.9 P69P  
In a slide germination test ferbam prevented germination of sporidia of *Cronartium fusiforme* at 1/6 the concentration usually applied in the nursery. With the use of a new method, telia germinated and sporidia abjected and germinated in 4. 8-6. 0 hours, or about 1/3 to 1/2 the time previously reported. Seedlings added up to 0. 5 inch of new terminal growth in 4 days. Ferbam seems to be an effective protectant, and occasional lapses in rust control with the current control recommendations apparently originate from failure to recognize the shorter duration of stages of the life cycle and the rapidity of seedling growth. These factors suggest that seedlings should be sprayed more frequently when weather conditions are favorable for rust infection or when they are growing rapidly.
- 197 Pillai, S. K., and Hildebrandt, A. C. GERANIUM PLANTS DIFFERENTIATED IN VITRO FROM STEM TIP AND CALLUS CULTURES. Plant Dis. Rep. 52(8):600-601. Aug. 1968. 1.9 P69P  
Propagating without virus transmission.
- 198 Singh, R. S., and Gröver, R. K. SOOTY MOLD OF COTTON AND OTHER HOSTS CAUSED BY *MICROXYPHIELLA HIBISCIFOLIA* IN NORTH INDIA. Plant Dis. Rep. 52(8):602-604. Aug. 1968. 1.9 P69P  
*Microxyphiella hibiscifolia* was collected from the leaves of cotton (*Gossypium arboreum* and *G. hirsutum*), *Hibiscus rosa-sinensis*, *H. mutabilis*, *Ficus glomerata* and *Pennisetum typhoides* from various localities of the Punjab and Harayana states of north India. The lesions were restricted to nectar glands on the veins of cotton and *H. rosa-sinensis* leaves; on 2 leaf auricles in *P. typhoides*; and irregularly distributed on *F. glomerata* and *H. mutabilis* leaves. Morphologically the pathogen from all the hosts was similar. Isolated from cotton infected cotton and *H. rosa-sinensis* and vice versa, whereas others were host-specific. The pathogen lost its viability on cotton leaves in 20-22 weeks while it was present in nature all the year round on *H. rosa-sinensis* leaves which are suspected to provide inoculum for primary infection of cotton. Pure culture of cotton isolate grew best on Richard's and potato-dextrose broth while pycnidial formation was maximum on potato-dextrose broth and asparagine-glucose-peptone nutrient solution.
- 199 Kline, D. M., and Nelson, R. R. OCCURRENCE IN *COCHLIOBOLUS CARBONUM* OF CAPACITIES TO BLIGHT GRAMINEOUS HOSTS. Plant Dis. Rep. 52(8):605-607. Aug. 1968. 1.9 P69P  
One hundred and forty-two isolates of *Cochliobolus carbonum* Nelson from diverse source hosts and geographic origins were tested for capacities to induce lesion or blight reactions on 28 gramineous test species. Thirty-eight isolates induced blight reactions on one or more test species. Nineteen of 28 test species exhibited blight reactions. Eighteen isolates induced blight reactions on from 2 to 8 test species. The remaining 20 isolates blighted only a single species. Eighteen different isolates blighted *Bouteloua curtipendula*; one isolate blighted each of 7 other test species; and from 2 to 9 isolates blighted each of the remaining 11 blight testers. All other isolate-host species interactions resulted in lesion reactions. The apparent host specificity of blight capacities and the differences among the isolates in capacities to blight different test species indicate that the capacities of *C. carbonum* to induce blight reactions upon gramineous host species are conditioned by a number of genes.

- 200 Joffe, A. Z. MYCOFLORA OF SURFACE-STERILIZED GROUNDNUT KERNELS. Plant Dis. Rep. 52(8):608-611. Aug. 1968. 1.9 P69P  
The mycoflora was determined of fresh and stored groundnut kernels removed from disinfected pods without further disinfection, and of kernels taken from similar pods but disinfected after their removal. Mercuric chloride (0.1%), served for disinfection. Eighty-three fungal species were found on all these kernels, with 35 species (including *Aspergillus flavus*) surviving kernel disinfection. Forty-six of the species found do not appear to have been recorded previously on groundnut pods or kernels.  
Although the number of colonies yielded by most species was predictably larger before kernels were disinfected, four of the more common species were more frequent after disinfection: *Aspergillus versicolor*, *Fusarium solani*, and *Penicillium rubrum* on fresh kernels, and *Aspergillus niger* on stored kernels.  
The high incidence of *A. niger* in stored kernels that were disinfected, as compared with those that were not, is taken to indicate a selective removal of antagonists of this species by mercurial disinfection.
- 201 Grogan, C. O., and Boling, M. PROPOSED DIPLOIDA STALK ROT INOCULATING TECHNIQUE FOR MAIZE. Plant Dis. Rep. 52(8):611-612. Aug. 1968. 1.9 P69P  
The use of a CO<sub>2</sub>-powered BB pistol appears promising as a technique for artificial inoculation of maize plants for reaction to *Diplodia stalk rot*. The method is rapid and reliable.
- 202 Tachibana, H. RHIZOCTONIA SOLANI ROOT ROT EPIDEMIC OF SOYBEANS IN CENTRAL IOWA 1967. Plant Dis. Rep. 52(8):613-614, map. Aug. 1968. 1.9 P69P  
203 Horst, R. K., and Hoitink, H. A. J. OCCURRENCE OF CYLINDROCLADIUM BLIGHTS ON NURSERY CROPS AND CONTROL WITH FUNGICIDE 1991 ON AZALEA. Plant Dis. Rep. 52(8):615-617. Aug. 1968. 1.9 P69P  
Cylindrocladium scoparium and C. floridanum caused severe losses in azalea, rhododendron, lilac and sweet-william cuttings and liners in Ohio and Florida. Of 16 fungicide drenches tested, only 1-(butylcarbamoyl)-2-benzimidazole carbamic acid, methyl ester (Fungicide 1991) gave 100% control of the disease. No control was obtained with 11 fungicides in cutting-soak trials. Calcium added in the form of dolomite, gypsum or hydrated lime did not alter disease levels significantly. Azaleas were most susceptible to disease at 75-80°F under high moisture conditions.
- 204 Wagon, H. K., and others. INVESTIGATIONS OF CHERRY RASP LEAF DISEASE IN CALIFORNIA. Plant Dis. Rep. 52(8):618-622. Ref. Aug. 1968. 1.9 P69P  
J. T. Taylor, H. E. Williams, and A. C. Weiner, joint authors.  
Cherry rasp-leaf virus disease has been noted in eight California counties. Diagnostic leaf symptoms in orchard trees appeared first in the trunk area and gradually progressed upward, suggesting that infection occurs in the roots. Two cherry trees, both originally propagated as healthy mahaleb seedlings in infested soil from around infected orchard trees, developed rasp-leaf virus disease symptoms. Rasp-leaf virus was recovered in a cherry tree when pollen from an infected cherry tree was placed under the bark. Nematodes, including *Xiphinema americana* Cobb, *Criconeoides* sp., *Helicotylenchus* sp., and *Pratylenchus* sp., were present in the soil collected around rasp-leaf infected orchard trees.
- 205 Harding, P. R. COMPARISON OF FUNGICIDE 1991, THIABENDAZOLE, AND SODIUM ORTHOPHENYLPHENATE FOR CONTROL OF PENICILLIUM (DIGITATUM AND P. ITALICUM) MOLDS OF POST-HARVEST CITRUS FRUITS. Plant Dis. Rep. 52(8):623-625. Ref. Aug. 1968. 1.9 P69P  
Packing house tests were run to compare 500 ppm 1-(butylcarbamoyl)-2-benzimidazole carbamic acid, methyl ester (Fungicide 1991), 500 ppm thiabendazole, and 2% sodium orthophenylphenate tetrahydrate applied in shipping wax emulsion for control of *Penicillium* mold decay in "Temple" tangors, "Navel" oranges, "Minneola" tangels, "Wilking" mandarins, and "Dancy" tangerines. There was no significant difference in effectiveness between the three treatments, with the Temple tangor, the strongest type of fruit used in the tests. With the other types of fruit, Fungicide 1991 was not consistently better than thiabendazole; both treatments, however, were consistently better than the sodium orthophenylphenate treatment.
- 206 Singh, K., and Misra, S. R. OCCURRENCE OF A CYST [HETERODERA] NEMATODE ON SUGARCANE IN INDIA. Plant Dis. Rep. 52(8):626. Aug. 1968. 1.9 P69P
- 207 Katcho, Z. A., and Allow, J. M. DAGGER NEMATODES, XIPHINEMA INDEX, ON GRAPEVINES IN IRAQ. Plant Dis. Rep. 52(8):626-627. Aug. 1968. 1.9 P69P
- 208 Hocking, D. STEM CANKER AND PINK STAIN OF TEAK IN TANZANIA ASSOCIATED WITH FUSARIUM SOLANI. Plant Dis. Rep. 52(8):628-629. Ref. Aug. 1968. 1.9 P69P  
*Fusarium solani* was consistently isolated from collar and stem cankers and from pink-stained wood of mature teak in Tanzania. Isolates killed seedlings when inoculated into collar wounds, resulting in pink-stained zones. This record extends the now broad host range of *F. solani* as a canker organism.
- 209 Schroeder, W. T., and Providenti, R. SYSTEMIC CONTROL OF POWDERY MILDEW ON CUCURBITS WITH FUNGICIDE 1991 APPLIED AS SOIL DRENCHES AND SEED TREATMENTS. Plant Dis. Rep. 52(8):630-632. Aug. 1968. 1.9 P69P  
Seed and soil treatments with 1-(butylcarbamoyl)-2-benzimidazole carbamic acid, methyl ester (Fungicide 1991) provided a systemic control of powdery mildew of squash and cucumber in the greenhouse commensurate with dosage. Application to young plants appeared most effective. Restricted development of mildew on petioles and main veins of leaves, instead of colonies scattered at random over the leaf blade, characterized a diminution of an effective dosage. Primary development of scattered colonies on plants previously treated with effective dosages instead of the restricted pattern indicated a form of the fungus resistant to the systemic effects of the fungicide.
- 210 Niehaus, M. H. RELATIVE AMOUNTS OF STRIPE AND FLAG SMUT ON MERION KENTUCKY BLUEGRASS [POA PRATENSIS]. Plant Dis. Rep. 52(8):633-634. Aug. 1968. 1.9 P69P  
A "Merion" Kentucky bluegrass lawn was systematically sampled on four dates in 1967 for incidence of stripe smut (*Ustilago striiformis* (West.) Niessl) and flag smut (*Urocystis agropyri* (Preuss) Schroet.). Over the four dates stripe smut was found on 54.2% and flag smut on 45.2% of the infected leaves. Because both diseases produce the same symptoms, the sori were examined microscopically for identification. The fact that two disease organisms are causing what appears to be one disease may cause problems for plant breeders and those developing chemical controls.
- 211 Ross, E. W. SAND PINE [PINUS CLAUSSA], A NEW HOST OF FOMES ANNOSUS. Plant Dis. Rep. 52(8):635. Aug. 1968. 1.9 P69P
- 212 Bilisky, P. M., Funk, C. R., and Babinski, P. L. CONTROL OF STRIPE SMUT IN KENTUCKY BLUEGRASS [POA PRATENSIS] TURF WITH A SYSTEMIC FUNGICIDE. Plant Dis. Rep. 52(8):635-637. Aug. 1968. 1.9 P69P  
Evaluation trials with protective and systemic chemicals were conducted to determine their effectiveness against stripe smut (*Ustilago striiformis*). The chemicals were applied as drenches to heavily smutted "Merion" Kentucky bluegrass turf. The results indicated that a new systemic fungicide, 1-(butylcarbamoyl)-2-benzimidazole carbamic acid, methyl ester (Fungicide 1991), is an effective control for this disease in perennial turf.
- 213 Redfern, D. B., and Van Sickle, G. A. FOMES ANNOSUS IN EASTERN CANADA. Plant Dis. Rep. 52(8):638. Aug. 1968. 1.9 P69P  
Picea spp. and Pinus resinosa.
- 214 Cheo, P. C. CONTROL OF ARMILLARIA MELLEAE WITH SYSTEMIC CHEMICALS. Plant Dis. Rep. 52(8):639-641. Aug. 1968. 1.9 P69P  
Ornamental plants.  
Twenty systemic chemicals were tested as to their relative inhibitory effect to the growth of *Armillaria mellea* (Vahl, ex Fr.) Quel. on potato-dextrose agar. Cycloheximide was very effective; it produced a lethal dosage level to the fungus at 20 ppm. Another systemic chemical, 2,4-dichlorophenoxy-acetonitrile was also effective, and had a lethal dosage level at 50 ppm. Acrizane chloride showed high fungistatic effect on *A. mellea* at 10 ppm level. Dimethyl sulfoxide (DMSO) at 1% level in the medium showed some inhibitory effect to the growth of *A. mellea*, and complete inhibition at the 10% level.

215 Stewart, D. M., and Romig, R. W. PREVALENCE OF PHYSIOLOGIC RACES OF *PUCINIA GRAMINIS* F. SP. *AVENAE* AND *TRITICI* IN THE USA IN 1967. *Plant Dis. Rep.* 52(8):642-646. Aug. 1968. 1.9 P69P

Seven races were identified among 706 isolates from 578 collections of *Puccinia graminis* (Pers.) f. sp. *tritici* Eriks. & E. Henn. made on wheat, barley, rye, and grasses in 1967. Races 15B-2 (61%), 11 (14%), 151 (12%), and 38 (7%) accounted for 94% of the isolates identified. Race 56 declined to 4%, the smallest percentage since the early 1930's; and race group 11-32 and 151 were more prevalent than in the 2 preceding years. Some isolates of race 11 and 32 attack Selkirk; certain cultures of 32 also attack Chris, Crim, and North Dakota 363-1; some cultures of 151 attack Chris, Crim, and Manitou; and certain isolates of 38 are virulent on Chris, Manitou, and Polk.

Race 6AF of *P. graminis* (Pers.) f. sp. *avenae* Eriks. & E. Henn. predominated for the third consecutive year (72%), 6F (23%), 6AH (3%), but the virulent 6AFH was not found.

Wheat stem rust races identified on barley included 11, 15B-2, a variant of 15B, and three isolates of race 32. Certain barley isolates of race 32 attacked more varieties than others.

Race of 6F of oat stem rust was found in three aecial collections on barley.

216 Kolke, H. LEAF SCALD OF SUGARCANE IN CONTINENTAL UNITED STATES—A FIRST REPORT. *Plant Dis. Rep.* 52(8):646-649. Ref. Aug. 1968. 1.9 P69P

In July 1967, symptoms similar to those of leaf scald disease were observed on several sugarcane varieties in the World Sugarcane Collection, U. S. Sugarcane Field Station, Canal Point, Florida. Several bacterial isolates were obtained in pure cultures from shoots developed from diseased vegetative cuttings. Typical symptoms of leaf scald were reproduced on the indicator sugarcane varieties B. H. 10/12 and Co. 281 with a bacterium similar in growth characteristics on Wilbrink agar to *Xanthomonas albilineans*, the causal organism of leaf scald. The pathogenic bacterium reacted positively to *X. albilineans* antiserum, but not to *X. rubrilancea* (sugarcane red-strip disease) and *X. vasculorum* (sugarcane gumming disease) antisera. This is the first report of leaf scald disease of sugarcane in continental United States.

217 Hiratsuka, Y., and Maruyama, P. J. IDENTIFICATION OF PERIDERMIUM HARKNESSII IN EASTERN CANADA ON THE BASIS OF NUCLEAR CONDITION OF AECIOSPORE GERM TUBES. *Plant Dis. Rep.* 52(8):650-651. Ref. Aug. 1968. 1.9 P69P

A gall rust of *Pinus banksiana* from Quebec and New Brunswick was identified as *Peridermium harknessii* J. P. Moore (Cronartium oleosporoides Arth.) on the basis of the nuclear condition of aeciospore germ tubes. This confirms that this fungus is distributed across northern North America.

218 Wysong, D. S., and Willis, W. G. RECORDED DISTRIBUTION OF DUTCH ELM DISEASE WEST OF THE MISSISSIPPI RIVER AS OF 1967. *Plant Dis. Rep.* 52(8):652-653, map. Ref. Aug. 1968. 1.9 P69P

Ceratocystis ulmi.

219 Connor, S. R., and Heuberger, J. W. APPLE SCAB. V. EFFECT OF LATE-SEASON APPLICATIONS OF FUNGICIDES ON PREVENTION OF PERITHECIAL DEVELOPMENT BY VENTURIA INAEQUALIS. *Plant Dis. Rep.* 52(8):654-658. Ref. Aug. 1968. 1.9 P69P

Field tests were conducted for 4 years on previously unsprayed "Rome" apple trees to determine the effect of late-season spray applications of organic fungicides, considered to have an eradicant action, on the prevention of perithecial development by *Venturia inaequalis* (Cke.) Wint. All fungicides were applied to trees prior to leaf fall and the results evaluated the following spring. Data were obtained on: (a) reduction in the number of perithecia; (b) percentage germination of naturally-ejected ascospores found in perithecia that developed on treated leaves.

Results of these experiments indicate that: (a) three applications of 65% dodine, 1 lb/100 gal., inhibited perithecial development by 50%; (b) three applications of 65% dodine in combination with glyodin, 1 lb/8 oz./100 gal., inhibited perithecial development by 65 to 75%; (c) three

applications of 65% dodine in combination with dimethyl sulfoxide, 1 lb/2 qt/100 gal., gave an effect comparable to that of the dodine-glyodin combination; (d) phenylmercuric chloride (0.1%) prevented perithecial development by 100% after two and three applications in 1967-1968;

(e) one application of 50% active 1-(butylcarbamoyl)-2-benzimidazole carboxylic acid, methyl ester in combination with a surfactant, 1 lb/60 ml/100 gal., completely inhibited perithecial formation; (f) where perithecia were present on treated leaves, the ascospores were viable.

220 Dance, B. W. OBSERVATIONS ON THE DEVELOPMENT OF HYPOXYLON [PRUNATUM] CANKERS ON TREMBLING ASPEN [POPULUS TREMULOIDES]. *Plant Dis. Rep.* 52(8):659-661. Aug. 1968. 1.9 P69P

Typical cankers of Hypoxylon prunatum (Klotzsch) Cke. were induced on young trembling aspen trees by inoculating stems with mycelium in August. Development of infections seemed uncertain for about 24 months, but cankers subsequently appeared, developed rapidly, and killed the trees. Mature perithecia were present after 45 months. Cankers developed about equally above and below inoculation sites, and at maturity averaged 60 cm in length.

221 Singh, R. N. CURVULARIA [TRIFOLI GLADIOLI] DISEASE OF GLADIOLI IN INDIA. *Plant Dis. Rep.* 52(8):662. Aug. 1968. 1.9 P69P

222 Singh, R. N., and Saksena, H. K. BACTERIAL BLIGHT DISEASE OF PADDY—SYMPTOMATOLOGY. *Plant Dis. Rep.* 52(8):663-664. Aug. 1968. 1.9 P69P

Studies on the symptoms of bacterial blight disease of paddy, caused by *Xanthomonas oryzae* (Ueyeda & Ishiyama) Dowd., were made under varying sets of field conditions in order to characterize further the leaf blight symptom described by Srivastava and Rao in 1966. It is concluded that this disease affects the plant at every stage of its development. The incubation period of the bacterium varies from 5 to 10 days depending upon age of the plant. Affected younger plants have poor root systems, less tillering, and stunted growth. If they develop ear heads at all, there are fewer of them and they contain much less grain. Severely diseased young seedlings show albino symptoms and may even die. The water exudation system of diseased plants is filled with the causal bacteria. The advancing edge of the marginal blight rapidly covers most of the leaf area crosswise and lengthwise, and always shows a wavy outline.

223 Sinclair, J. B. ERADICATION OF CITRUS CANKER FROM LOUISIANA. *Plant Dis. Rep.* 52(9):667-670. Ref. Sept. 1968. 1.9 P69P

*Xanthomonas citri*.

224 Marsh, P. B., and Simpson, M. E. OCCURRENCE OF FIBER CONTAINING FLUORESCENT SPOTS ASSOCIATED WITH ASPERGILLUS FLAVUS BOLL ROT IN THE U.S. COTTON CROP OF 1967. *Plant Dis. Rep.* 52(9):671-674. Sept. 1968. 1.9 P69P

Ultraviolet light used for detection. Examination of a series of 2250 cotton fiber samples from the U.S. crop of 1967 to detect *Aspergillus flavus*-associated fluorescing spots has revealed very few or no samples with such spots from most locations, but significant numbers from certain parts of California, Arizona, and Texas. This geographical distribution in the 1967 crop was very similar to the distribution observed in earlier surveys on the crops of 1957 and 1966.

225 Gracia, O., and others. SOME VIRUSES AFFECTING TOMATOES AND PEPPERS IN ARGENTINA. *Plant Dis. Rep.* 52(9):674-676. Sept. 1968. 1.9 P69P

J. M. Feldman, R. E. Pontis, and J. Boninsegna, joint authors.

A survey of mechanically transmitted viruses from tomato and pepper crops was carried out in the province of Mendoza, Argentina. Alfalfa mosaic virus on pepper and tomato bushy stunt virus on tomato are reported for the first time in Argentina, and potato virus Y on tomato and pepper, and cucumber mosaic virus on tomato for the first in Mendoza. Tobacco mosaic and tomato spotted wilt are common viruses frequently found on both crops; they appear to be endemic and widely spread in this province. Potato virus X was detected only on tomato. Other viruses not yet identified are under study.

Identifications were based primarily on host range and serological reactions.

(Continued in next column)

- 226 Pontis, R. E., Gracia, O., and Feldman, J. M. TOMATO BUSHY STUNT VIRUS ON TOMATO CROPS IN ARGENTINA. *Plant Dis. Rep.* 52(9):676-677. Sept. 1968. 1.9 P69P  
Tomato bushy stunt virus was isolated from tomato crops for the first time in Argentina. Identification was based on host range, in vitro properties, serological reactions, and electron micrographs.
- 227 Cole, H., and Anderson, P. M. CARBON DIOXIDE-POWERED PLOT SPRAYER FOR TURFGRASS DISEASE CONTROL FUNGICIDE APPLICATION. *Plant Dis. Rep.* 52(9):678-682. Sept. 1968. 1.9 P69P  
A sprayer was designed and constructed for application of experimental fungicides at varying dosage, volume, pressure and plot size to turfgrass areas. It was constructed of aluminum, brass, and stainless steel, on two bicycle wheels with a trailing caster wheel for control of boom height. Hydraulic pressure for spraying is produced by a CO<sub>2</sub> cylinder mounted on the unit. Four different boom widths were provided for spraying plots from 2 to 6 feet in width. It was designed to be manually propelled by one person with rate of travel shown by a speedometer calibrated to 0.1 mph. Spray output could be varied from 0.4 to 10 gallons per 1000 sq. ft. by selection of proper pressure, nozzle tip orifice, and boom nozzle spacing. Pressures were adjustable from 1 to 100 psi. The spray booms were easily adjustable for boom height and angle of spray contact. Very precise spray volume outputs and spray patterns could be maintained from plot to plot after initial calibration.
- 228 Morton, D. J., Fieldhouse, D. J., and Kim, S. H. EFFECTS OF BACTERICIDES, SACCHARIN, AND ALAR ON PEPPER YIELD AND BACTERIAL SPOT IN DELAWARE, 1967. *Plant Dis. Rep.* 52(9):683-685. Sept. 1968. 1.9 P69P  
*Xanthomonas vesicatoria*.  
Fixed copper (cupric hydroxide) containing 56 metallic Cu (Kocide 101) (K 101) at 2 lb/acre was the only treatment tested which significantly (5% level) increased the weight and number of marketable peppers; tribasic copper sulfate at 4 lb/acre significantly increased the weight but not the number. K 101 at 1 lb/acre and the addition of oil at 2 lb/acre gave insignificant results.  
Saccharin was applied to the soil and the foliage at different rates and was tested in combination with Alar; none of these treatments significantly affected yields.  
Bacterial spot incidence was fairly heavy but varied markedly within plots. No significant differences were calculated among treatments for bacterial spot control on either foliage or peppers.
- 229 Morton, D. J., and Kim, S. H. YIELD INCREASES AND ANTHRACNOSE AND EARLY BLIGHT REDUCTIONS ASSOCIATED WITH TOMATO FUNGICIDE TESTS IN DELAWARE, 1967. *Plant Dis. Rep.* 52(9):685-687. Sept. 1968. 1.9 P69P  
Caused by *Colletotrichum phomoides* and *Alternaria solani*, respectively.  
Fungicide treatments were compared at Newark and Georgetown, Delaware. N-(1,1,2,2-tetrachloroethyl)sulfonyl-cis-4-cyclohexene-1,2-dicarboximide (Difolatan) (Dfn.) 80W (3 lb/acre), Dfn. 4F (6 lb/acre), tetrachlorophthalonitrile (Daconil) (DAC 2787) (2 lb and 3 lb/acre), and 80% maneb and 20% inert including zinc (Dithane M-22 Special) (maneb + zinc) (3 lb/acre) significantly reduced anthracnose incidence at both locations and increased yield (weight) at Georgetown. With respect to yield, both Dfn. treatments were significantly more effective than either DAC 2787 at 2 lb or maneb + zinc; DAC 2787 at 3 lb was intermediate. Yield differences at Newark were not significant. The above treatments, as well as fixed copper (cupric hydroxide) containing 56% metallic Cu (Kocide 101), significantly reduced foliar early blight incidence at Georgetown.
- 230 Kaiser, W. J., and others. DISEASES OF PULSE CROPS (EDIBLE LEGUMES) IN IRAN. *Plant Dis. Rep.* 52(9):687-691, map. Sept. 1968. 1.9 P69P  
D. Danesh, M. Okhovat, and H. Mossahebi, joint authors.  
Diseases are a constant threat and often a limiting factor in the cultivation of pulse crops in Iran. In the drier areas diseases caused by viruses and root rot fungi were seen most frequently and were of greatest economic importance, while foliar diseases were usually confined to the wetter regions of the country. The diseases of beans, broadbeans, chickpeas, cowpeas, lentils, mungbeans, and peas that occur in Iran are listed and some observations on their importance and distribution within the country are made.
- 231 Slattery, R. J. CONTROL STUDIES ON GYM-NOSPORANGIUM JUNIPERI-VIRGINIANAE ON JUNIPERS [JUNIPERUS SCOPULORUM AND J. VIRGINIANA]. *Plant Dis. Rep.* 52(9):692-695. Sept. 1968. 1.9 P69P  
Cycloheximide, N-(phenylmercurio)ethylene-diamine (Coromerc) (Cor.) and 2,3-dihydro-5-carboxanilido-6-methyl-1,4-oxathiazin-4,4-dioxide (Plantvax) (DCMOD) caused internal and external necrosis of young galls of *Gymnosporangium juniperi-virginianae*. They also reduced the number of galls that formed telia and the germinability of the teliospores. The effectiveness of each fungicide was increased by the addition of dimethyl sulfoxide. Cycloheximide and DCMOD were more effective than Cor. in reducing the number of galls with telia and germinability of the teliospores. Cycloheximide, however, caused conspicuous phytotoxicity when applied in June.
- 232 Chandler, W. A. PREHARVEST FUNGICIDES FOR PEACH BROWN ROT CONTROL. *Plant Dis. Rep.* 52(9):695-697. Sept. 1968. 1.9 P69P  
*Monilia fructicola*.  
In field fungicide test extending over 6 years, three preharvest applications of certain organic fungicides and fungicidal mixtures following wettable sulfur have generally provided better postharvest brown rot control than a full schedule of sulfur.  
In a single test, three preharvest applications of a new fungicide, 1-(butylcarbamoyl)-2-benzimidazole carbamic acid, methyl ester, resulted in outstanding brown rot control.
- 233 Zwet, T. van der. RECENT SPREAD AND PRESENT DISTRIBUTION OF FIRE BLIGHT IN THE WORLD. *Plant Dis. Rep.* 52(9):698-702, map. Ref. Sept. 1968. 1.9 P69P  
Fire blight (*Erwinia amylovora*) of pear, apple, and other rosaceous hosts is believed to be indigenous to the United States. Between 1780 and 1890 it spread from New York to California. During the early 1900's the disease was observed in Canada, Japan, New Zealand, and Mexico. Since 1957, fire blight has been recorded in England, Chile, Egypt, Poland, The Netherlands, and Guatemala. All other reports outside these 11 countries are unconfirmed observations of blossom blight or pear blast caused by *Pseudomonas syringae*.
- 234 Nome, S. F., and Docampo, D. AN ADDITIONAL LIST OF PLANT PATHOGENS NOT PREVIOUSLY REPORTED IN CHILE. *Plant Dis. Rep.* 52(9):703-704. Sept. 1968. 1.9 P69P  
Vegetables; includes soybeans.
- 235 Anzalone, L. VIRUS INOCULUM CONCENTRATION IN RELATION TO SCREENING SUGARCANE SEEDLINGS FOR LEVELS OF RESISTANCE TO STRAIN H OF SUGARCANE MOSAIC VIRUS. *Plant Dis. Rep.* 52(9):705-707. Sept. 1968. 1.9 P69P  
Sugarcane varieties and seedlings or sorghum seedlings were inoculated with sugarcane mosaic virus preparations from infected sorghum leaf tissue and water in ratios of 1:1, 1:3, 1:10, and 1:100. Results suggest that the 1:3 and 1:10 dilutions of the virus preparations might be more efficient in screening for acceptable levels of resistance than lower or higher dilutions.
- 236 Parmeter, J. J., and Miller, P. R. STUDIES RELATING TO THE CAUSE OF DECLINE AND DEATH OF PONDEROSA PINE [PINUS PONDEROSA] IN SOUTHERN CALIFORNIA. *Plant Dis. Rep.* 52(9):707-711. Sept. 1968. 1.9 P69P  
Fertilization of ponderosa pines failed to arrest or reverse the disease condition variously referred to as X-disease, chlorotic decline, or ozone needle mottle. Injection of trace elements did not improve needle color or retention. Healthy scions grafted onto diseased trees remained healthy. Diseased scions on healthy trees remained diseased. These observations, coupled with observations on the distribution of diseased trees in relation to site, topography, and geography, suggest that drought, nutritional deficiency, or rootlet deterioration are not primarily responsible for the disease. Prolonged exposure to aerial oxidants, mainly ozone, appears to be the primary cause.

- 237 Fordyce, C. MICROORGANISMS ASSOCIATED WITH MARKET DETERIORATION OF THE CULTIVATED MUSHROOM, *AGARICUS BISPORUS*. Plant Dis. Rep. 52(9):712-714. Ref. Sept. 1968. 1.9 P69P  
Mushrooms from five local grocery chain stores were sampled weekly for 6 weeks to determine the microflora associated with deterioration. The samples included mushrooms from 19 growers. All mushroom samples except one were from growers located in the Chester County area of Pennsylvania. Fourteen genera of fungi were isolated on agar plates. Mushrooms from 11 growers were infected with *Trichoderma koningi* Oud. and those from 7 growers were infected with *Verticillium dahliae* Ware. Deterioration of mushrooms which had been commercially treated with sodium bisulfite prior to packaging was more rapid and microorganisms were more prevalent than with untreated mushrooms.
- 238 Sinha, S. K., Mukhopadhyay, A. N., and Saxeña, S. C. BACTERIAL BLIGHT OF SUGARBEET IN INDIA. Plant Dis. Rep. 52(9):715. Sept. 1968. 1.9 P69P  
*Pseudomonas aptata*.
- 239 Cook, R. J., and others. OCCURRENCE OF TAKE-ALL IN WHEAT IN THE PACIFIC NORTHWEST. Plant Dis. Rep. 52(9):716-718, map. Sept. 1968. 1.9 P69P  
D. Huber, R. L. Powelson, and G. W. Bruehl, joint authors.  
Take-all of wheat caused by *Ophiobolus graminis* is increasing in importance in the Pacific Northwest because of increases in the acreage of irrigated wheat. Between 600,000 and 650,000 acres of wheat were irrigated in the Pacific Northwest in 1967, representing about 15% of the total wheat acreage and 30-35% of the total production. Losses caused by take-all in 1967 occurred primarily in the irrigation districts and were estimated at 4% of the total irrigated wheat in Idaho, the oldest irrigation district; 2% in Washington; and 0.5% in Oregon, where irrigated wheat culture is most recent. Total loss under irrigation for 1967 was estimated at between 1 and 2 million bushels. Wheat following wheat, together with the presence of ample water on typically light-textured soils of most irrigation districts, apparently accounts for the increase of take-all.
- 240 Joffe, A. Z., and Lisker, N. EFFECT OF SOIL FUNGICIDES ON DEVELOPMENT OF FUNGI IN SOIL AND ON KERNELS OF GROUNDNUT. Plant Dis. Rep. 52(9):718-721. Sept. 1968. 1.9 P69P  
The effects on soil mycoflora and kernel yield of soil fungicides applied to groundnuts grown in barrels inoculated with *Aspergillus flavus* were studied.  
Populations of *A. flavus* in the soil declined during the period of groundnut growth even without fungicidal treatments, but the decline was much steeper in soil treated with tetrachloroophthalonitrile or potassium sorbate, less so after pentachloronitrobenzene (PCNB) 10-4 treatment. Frequency of the dominant genera of soil fungi was not affected.  
The stage of groundnut growth at which PCNB was applied to the soil did not markedly affect the rate of *A. flavus* recovery from the soil at harvest. *A. niger* was relatively frequent, and *Fusarium solani* scarce, in kernels from soil untreated or treated with PCNB at seedling emergence, while the reverse was true where soil was treated at later stages.  
Treatments did not affect development of the groundnuts or their yield.
- 241 Ogawa, J. M., Manji, B. T., and Bose, E. EFFICACY OF FUNGICIDE 1981 IN REDUCING FRUIT ROT OF STONE FRUITS. Plant Dis. Rep. 52(9):722-726. Sept. 1968. 1.9 P69P  
Brown rot.
- 242 Simpson, W. R., and Fenwick, H. S. CHEMICAL CONTROL OF CORN HEAD SMUT. Plant Dis. Rep. 52(9):726-727. Sept. 1968. 1.9 P69P  
*Sphecotheca relliana*.
- 243 Miller, P. M., and Rich, S. REDUCING SPRING DISCHARGE OF *VENTURIA INAEQUALIS* ASCOSPORES BY COMPOSTING OVERWINTERING LEAVES. Plant Dis. Rep. 52(9):728-730. Sept. 1968. 1.9 P69P  
Nitrogenous fertilizers applied in late autumn hasten the decomposition of dropped apple leaves during the following winter. This decomposition greatly reduces the production of ascospores from leaves naturally infected with *Venturia inaequalis* (Cke.) Winter, and may reduce the number of primary infections in the spring. Autumn applications of both lime and potassium phosphate also inhibit ascospore discharge but not so effectively as nitrogenous fertilizers. None of these treatments reduces ascospore discharge when applied in the spring.
- 244 Miller, P. M., and Rich, S. OZONE DAMAGE ON APPLES. Plant Dis. Rep. 52(9):730-731. Sept. 1968. 1.9 P69P  
Exposure to high rates of ozone for 3 days produced grey to brown pitted areas around lenticels of "Cortland," "Red Rome," and "McIntosh" apples, but not on "Red Delicious" or "Golden Delicious" apples. These pits were 1 to 2 mm in diameter, with a corky area extending 1 mm into the flesh. Neither light nor relative humidity influenced occurrence of the injury.

During the 10 years between 1955 and 1965, U. S. households changed their food consumption patterns to include more meat, poultry, and fish and more bakery products, but smaller quantities of milk, vegetables and fruit, and flour and cereals. These are findings from nationwide food consumption surveys made in spring 1955 and 1965.  
Both farm and urban households shared in these changes in food consumption. However, for every major food group except vegetables and fruit, the change in average quantity used was greater in farm than urban households.

## FOREIGN AGRICULTURAL SERVICE

- 340 Stokes, D. R. PERISHABLE EXPORTS: PACKING STUDIES AIM TO EXPAND MARKETS. Foreign Agr. 6(36):2-5. Sept. 2, 1968. A281.9 F76Fo  
Chiefly U. S. fruit and vegetable exports to Europe.

- 341 Dirks, H. J. EEC ESTABLISHES SINGLE MARKET FOR BEEF. Foreign Agr. 6(36):6-7. Sept. 2, 1968. A281.9 F76Fo

The European Economic Community on July 1 completed its 5-year advance toward a single market for beef. With import prices of its six members now unified, the Community becomes an even more limited market for imports of beef carcasses and cuts from third countries. But it still presents a fairly good market for livestock and meat products not covered by the import levy system.

The basic changes provided for in the market unification are as follows:

Abolition of all trade barriers among member countries—the one exception being for veterinary reasons.

Establishment of a single market, orientation, and intervention prices, plus a common-import levy against third country imports.

Special import arrangements for young fattening cattle.

New provisions for importing lower quality frozen beef destined for manufacturing purposes.

Export subsidies covering the difference between Community and world market prices.

- 342 Thadani, J. A. A LOOK AT INDIA'S OILSEEDS SITUATION. Foreign Agr. 6(36):8-9. Sept. 2, 1968. A281.9 F76Fo  
Yields and policies.

The vegetable oils situation for India has considerably improved in 1968 after a period of 4 difficult years, thanks to the large oilseeds crops harvested in 1967-68. The domestic production situation for the ensuing season also shows promise, but much still depends on weather conditions during September and October.

- 343 Kriesberg, M. FOOD PROBLEMS: SEARCH FOR SOLUTIONS TURNS TO DISTRIBUTION. Foreign Agr. 6(37):2-4. Sept. 9, 1968. A281.9 F76Fo  
Policies needed, chiefly in developing areas.

Food is now being produced in greater quantities than ever before, but the problem of getting it to those who need it still remains to be solved.

352 Horsley, B. J. A SALUTE TO COOPERATIVES IN U.S. AGRICULTURAL TRADE. Foreign Agr. 6(39):2-3. Sept.23,1968. A281.9 F76Fo

Cooperatives penetrate every phase of U.S. farm trade—with functions varying from marketing of beans overseas to buying grass seed in Europe and twine in Mexico for use on farms at home. And they play an equally important role in the trade of our customers and competitors.

353 Kampe, R. E. PREVIEW; SOUTH AFRICA'S FARM TRADE. Foreign Agr. 6(39):4-6. Sept.23,1968. A281.9 F76Fo

Abstract, p.4.

354 Stephanides, C. S. IRAN'S FARMERS ACHIEVING GREATER OODGRAIN OUTPUT. Foreign Agr. 6(39):8. Sept.23,1968. A281.9 F76Fo

Production of wheat, barley, rice, and pulses in Iran is estimated up for the 1968-69 season because of favorable weather (abundant spring rainfall) and increased crop acreage. Both production and area planted of major food grains has been steadily climbing in the country.

355 Clendenen, C. M. MOROCCO'S FERTILIZER PROGRAM GETS RESULTS. Foreign Agr. 6(39):9-10. Sept.23,1968. A281.9 F76Fo

Now in its second year, "Operation Engrais"—"Operation Fertilizer"—is credited with being one of the main reasons for Morocco's expected record-breaking cereal production this year. Because of increased fertilizer use sparked by this program to fertilize the maximum amount of wheat land possible plus favorable weather, a 1967-68 cereals crop of nearly 4.9 million metric tons is probable according to preliminary estimates. Last year's crop totaled 2.6 million tons.

356 Boulware, J. H. INDIA INCREASES STORED GRAIN; EYES NEXT HARVEST. Foreign Agr. 6(39):10. Sept.23,1968. A281.9 F76Fo

The 1967-68 bumper wheat crop (now estimated by the Indian Government at 16.6 million metric tons), plus record production of barley, corn, sorghum, and spiked millets, has helped Indian officials to double stocks of stored grain between the beginning of January and the end of July this year. Another aid to increasing stocks has been continued sizable imports of foodgrains—chiefly from the United States.

357 Bowser, W. C. ECUADOR SEES THREE NEW EXPORT PROSPECTS. Foreign Agr. 6(39):11-12. Sept.23,1968. A281.9 F76Fo

Growing interest in the world export market is leading Ecuador, long dependent on a few key cash-earning crops, to diversify its agricultural base. This is bringing abaca, tea, and mushrooms—three commodities seen to have export potential—to a position of new importance in Ecuador's farm industry.

358 Minneman, P. G. WEST GERMAN FARMERS OPPOSE EEC PLANS TO USE MORE SUGAR IN FEED. Foreign Agr. 6(39):13. Sept.23,1968. A281.9 F76Fo

359 Noilmeyer, J. B. USDA'S BARTER PROGRAM; HOW IT'S CHANGED, WHAT IT'S DOING. Foreign Agr. 6(40):2-4. Sept.30,1968. A281.9 F76Fo

Now in its sixth year, USDA's "new-style" barter program has strengthened the U.S. balance of payments position as a boon to commercial exports.

360 Hume, D. L. BRITAIN'S GRAIN TRADE MAINTAINS AN EVEN KEEL. Foreign Agr. 6(40):4. Sept.30,1968. A281.9 F76Fo

An increased share of the U.K. grain demand was supplied by home-grown crops in 1967-68, but total grain imports remained relatively steady. Breadgrains (except rye) and feedgrains were down about 2 percent, with the biggest reductions in barley, sorghums, and oats. Imports of feed wheat and corn rose.

361 Rowan, W. S. CHILEAN FARMERS BRACE FOR WORSENING DROUGHT. Foreign Agr. 6(40):5. Sept.30,1968. A281.9 F76Fo

Effects on plants and livestock.

362 Abel, M. E. HOW FARM EXPORTS AID AGRIBUSINESS TRADE. Foreign Agr. 6(40):7-9. Sept.30,1968. A281.9 F76Fo

Some of the U.S. Government programs used in our agricultural export operations employ considerable ingenuity not only to help expand the export movement of farm products but also to help stimulate economic development in the importing country—thereby helping to increase demand for agribusiness products.

These are, basically, financing programs. They are good tools. We have had a lot of satisfactory experience with them. We find that they are useful both to help capture a larger share of the foreign market for our agricultural products and to help expand the market for all products.

There are four of these programs:

- CCC export credit sales program;
- Private trade sales agreements;
- Loans to private enterprise (Cooley loans);
- Agricultural market development program.

363 Magleby, R. S. MEXICO'S PACIFIC NORTH; DESERT PLUS WATER EQUALS FARM PROSPERITY. Foreign Agr. 6(40):10-11. Sept.30,1968. A281.9 F76Fo

The rim of land surrounding the Gulf of California is not at first glance one of Mexico's most promising agricultural areas. The climate ranges from semiarid in the southern and mountain areas to very arid in the northern and coastal regions. But extensive irrigation projects using both surface and underground water, together with some local initiative, have made the region a major source of vegetables, fruits, wheat, and cotton for both domestic and foreign markets.

## FOREST SERVICE

366 Potter, D. R. NEW HERBICIDE KILLS NINEBARK [PHYSOCARPUS MALVACEUS]. U. S. Forest Serv. Res. Note INT-75,2 p. 1968. A99.9 F764Un

Picloram used in forests. Ninebark can be killed with Tordon 22K or Tordon 101 with little danger to wildlife. Two spray coverages were found equally effective: foliage only and foliage-stem-root collar. No regrowth or sprouting occurred during three growing seasons.

367 Johnson, Von J. BUILDUP INDEX [OF THE NATIONAL FIRE DANGER RATING SYSTEM] AS AN EXPRESSION OF MOISTURE CONTENT IN DUFF. U. S. Forest Serv. Res. Note NC-43,4 p. 1968. ASD11.A33

The relation between Buildup Index and moisture content of grouped litter and duff samples from beneath four medium-site forest stands closely approximated the relation between Buildup Index and moisture equivalent of 5-day timelag fuels having an equilibrium moisture content of 15 percent.

368 Arola, R. A. A DUAL-RANGE STRAIN GAGE WEIGHING TRANSDUCER EMPLOYING AUTOMATIC SWITCHING. U. S. Forest Serv. Res. Note NC-44, 4 p. 1968. ASD11.A33

Describes a dual range strain gage transducer which has proven to be an excellent weight-sensing device for weighing trees and tree-length logs; discusses basic principles of the design and operation; and shows that a single transducer having two sensitivity ranges with automatic internal switching can sense weight with good repeatability and that one calibration curve serves the entire ambient temperature range in which it is used.

- 369 Bare, B. B. A COMPUTER PROGRAM FOR DISPLAYING FOREST SURVEY TYPE INFORMATION. U. S. Forest Serv. Res. Note NC-45,4 p. 1968, aSD11.A33

Presents a computerized procedure for displaying forest type information from inventory plots. Although the development of general forest type maps is emphasized, the program can be used to display any locational data having rectangular coordinates.

- 370 Cooper, G. A. USE HARDWOODS FOR BUILDING COMPONENTS. U. S. Forest Serv. Res. Note NC-46,4 p. 1968, aSD11.A33

Describes a system for prefabricating structural units from hardwoods for use in roofs, floors, and walls of A-frame or post-and-beam type construction. The interior face of the unit is decorative paneling; the exterior face is sheathing. Use of the system could reduce prefabricated house construction costs compared to conventional construction costs.

- 371 Tubbs, C. H. THE INFLUENCE OF RESIDUAL STAND DENSITIES ON REGENERATION IN SUGAR MAPLE STANDS. U. S. Forest Serv. Res. Note NC-47,4 p. 1968, aSD11.A33

Lake States.  
Studies of regeneration 2, 5, and 10 years after cutting mature and overmature sugar maple stands to several residual densities show that (1) sugar maple is still the predominant species under all stand densities (2) nearly all regeneration reaching larger size classes became established before cutting (3) heavier cuttings (30, 50, and 70 square feet) are more rapidly making up deficits in sapling and pole sized classes than the lightest cutting (90 square feet).

- 372 Gysel, L. W. DEER BROWSE PRODUCTION OF OAK STANDS IN CENTRAL LOWER MICHIGAN. U. S. Forest Serv. Res. Note NC-48,4 p. 1968, aSD11.A33

Forest management.  
The extensive oak forests of Lower Michigan provide essential habitat for white-tailed deer and other wildlife. Clearcutting these stands results in high browse production (500-1000 lbs./acre) compared to uncut stands is under 18 inches tall, whereas most of that in open stands is above snowline and thus available in winter.

- 373 Benzie, J. W. REGENERATION OF CUTOVER JACK PINE STANDS. U. S. Forest Serv. Res. Note NC-49,4 p. 1968, aSD11.A33

Jack pine can be regenerated on mineral soil seedbeds by scattering cone-bearing branches or repellent-treated seed. On some areas where competition develops, the seedlings may need to be released between the third and fifth years.

- 374 Chase, C. D. MICHIGAN'S TIMBER VOLUME. U. S. Forest Serv. Res. Note NC-50,4 p. 1968, aSD11.A33

Michigan's timber volumes increased about two-fifths since 1955 reaching 15.0 billion cubic feet of growing stock including 33.7 billion board feet of sawtimber-size material in 1966.

- 375 Little, S. RESULTS OF HERBICIDE TRIALS TO CONTROL JAPANESE HONEYSUCKLE [LONICERA JAPONICA]. U. S. Forest Serv. Res. Note NE-62,8 p. 1967, A99.9 F762U

Three or more annual sprays are required to eliminate Japanese honeysuckle where 2,4-D, a mixture of 2,4-D and 2,4,5-T, or amitrole is applied as either a low-volume (mistblower) or high-volume spray. Dicamba and picloram are more effective. The mixture of 2,4-D and picloram is recommended as the best material for eliminating honeysuckle in a single treatment at the time of harvesting overstory trees. However, 3 gallons of the material, costing about \$33, are required per acre.

- 376 McCauley, O. D. THE VALUE ADDED BY SAWMILLING IN THE APPALACHIAN HILL COUNTRY OF OHIO AND KENTUCKY. U. S. Forest Serv. Res. Note NE-67,4 p.m.p. 1967, A99.9 F762U

The difference between log costs and lumber values at 40 sawmills in the Appalachian hill country of Ohio and Kentucky provides an estimate of the value added by sawmill production. Based on these estimates, sawmilling contributed about \$12.8 million to the region's economy in 1962.

- 377 Sassaman, R. W. A COMPUTER PROGRAM FOR CALCULATING ALLOWABLE CUT USING AREA REGULATION AND A COMPARISON WITH THE ARVOL METHOD. U. S. Forest Serv. Res. Note PNW-63, 7 p. Sept. 1967, A99.9 F762U

- 378 Li, C. Y. EFFECT OF pH AND TEMPERATURE ON GROWTH OF PORIA WEIRII IN VITRO. U. S. Forest Serv. Res. Note PNW-66,6 p. Oct. 1967, A99.9 F762U

- 379 Adams, T. C. PRICE TRENDS OF OPEN-MARKET DOUGLAS-FIR LOGS IN WESTERN WASHINGTON AND NORTHWEST OREGON. U. S. Forest Serv. Res. Note PNW-74,6 p. Jan. 1968, A99.9 F762U

- 380 Harris, A. S. SMALL MAMMALS AND NATURAL REFORESTATION IN SOUTHEAST ALASKA. U. S. Forest Serv. Res. Note PNW-75,7 p. Feb. 1968, A99.9 F762U

Biannual (May or June and September), small-mammal censuses were made for 9 years on a cutover and a timbered plot in Maybeso Creek valley near Hollis, Prince of Wales Island, Alaska. *Peromyscus*, *Microtus*, and *Sorex* were captured on both plots. Over the study period, *Peromyscus* were six times more plentiful in the timber, whereas *Microtus* were six times and *Sorex* twice as numerous on the cutting. The greatest number of animals were caught in the spring of 1958, the fewest in the spring of 1963. Adequate natural regeneration of approximately 550 sitka spruce and western hemlock seedlings per acre became established on the cutover plot despite the presence of small mammals.

- 381 Barrett, J. W. RESPONSE OF PONDEROSA PINE POLE STANDS TO THINNING. U. S. Forest Serv. Res. Note PNW-77,11 p. Apr. 1968, A99.9 F762U

Thinning dense ponderosa pine pole stands on site V in northern Washington will promote greater diameter growth per tree and greater wood production on trees that will reach usable size. Trees spaced 13.2, 18.7, and 26.4 feet apart grew in diameter at the rate of 2.0, 2.6, and 3.2 inches per decade, respectively. Comparable trees in the unthinned plots grew only 0.63, 0.68, and 0.73 inches per decade. Height increment did not differ between spacings for trees of comparable initial diameters. The closest spacing produced about 31 cubic feet per acre per year compared to 19 cubic feet at the widest spacing.

- 382 Storey, T. G. AIR TANKERS IN SOUTHERN CALIFORNIA FIRES; EFFECTIVENESS IN DELIVERING RETARDANTS RATED. U. S. Forest Serv. Res. Note PSW-155,4 p. 1967, A99.9 F762

Eleven air attack experts were asked to rate 12 models of fixed-wing tankers and light helitankers for effectiveness in delivering chemical fire retardants under 21 typical situations. They rated fixed-wing tankers as more effective in strong wind crosswinds, and downwind approaches, but helitankers as more effective in narrow canyons and on steep slopes. Certain models were considered better performing than others in specific situations. The study provides the dispatcher with some guidelines on the type and model of aircraft to send out in given situations.

- 383 Yerkes, V. P. EFFECT OF SEASONAL STEM MOISTURE VARIATION AND LOG STORAGE ON WEIGHT OF BLACK HILLS PONDEROSA PINE. U. S. Forest Serv. Res. Note RM-96,8 p. Ref. 1967, A99.9 F762U

Stem moisture content of ponderosa pine trees in the Black Hills fluctuated enough from season to season to account for a significant portion of the variability that might be experienced in weight scaling. A difference in moisture content of trees on different growing sites was also noted. Weight loss from logs left in woods storage for up to 108 days was not great and could largely be ignored in weight scaling. Lumber degrade during storage would probably be a more serious problem, and normally would be the main concern in log storage.

- 384 Amman, G. D. SYMPTOMS OF INFESTATION BY THE BALSAM WOOLLY APHID [ADELGES PICEAE] DISPLAYED BY FRASER FIR [ABIES FRASER] AND BRACED BALSAM FIR [A. BALSAMEA PHANEROLEPIS]. U. S. Forest Serv. Res. Note SE-85,7 p. Sept. 1967, A99.9 F762U

Stands of braced balsam fir in Shenandoah National Park in Virginia and Fraser fir near Mt. Mitchell in North Carolina were examined to determine differences in symptoms displayed by the two species to infestation by the balsam woolly aphid. The principal injury to braced balsam fir was gouting of nodes and buds. Dying of branches began at the top of the tree and proceeded toward the base. However, braced balsam fir trees survived several years of aphid infestation. Fraser fir was injured primarily from stem infestations by the aphid. Mortality of branches began at the base of the crown and proceeded to the top. Fraser fir trees died after a short period of aphid infestation.

- 395 Smalley, G. W. SOIL-SITE RELATIONS OF UPLAND OAKS IN NORTH ALABAMA. U. S. Forest Serv. Res. Note SO-64,6 p. 1967. A99.9 F7628U  
On 36 white oak plots on the Cumberland Plateau south of the Tennessee River, site quality was related to slope position and total length of slope. On 22 mixed red oak plots, site quality was related to aspect and slope position. No soil factors were significantly related to tree height after the effects of age and topography were taken into account.
- 396 Beltz, R. C. LAND CLEARING IN THE DELTA REGION OF MISSISSIPPI, 1957-1967. U. S. Forest Serv. Res. Note SO-69,3 p., map. 1967. A99.9 F7628U
- 397 Bonner, F. T. RESPONSES TO SOIL MOISTURE DEFICIENCY BY SEEDLINGS OF THREE HARDWOOD SPECIES. U. S. Forest Serv. Res. Note SO-70,3 p. 1968. A99.9 F7628U
- 398 Schumann, D. R. DIMENSION STOCK; YIELDS OF SPECIFIC WIDTH CUTTINGS FROM 4/4 HARD MAPLE LUMBER. U. S. Forest Serv. Res. Paper FPL-85,48 p. Dec. 1967. A99.9 F7634U  
An easy method of obtaining yields of dimension stock from 4/4 hard maple lumber is presented for the four top lumber grades. By the use of nomograms, it is possible to determine the yield for any particular cutting bill. The amount of lumber needed to fill an order can be calculated and comparisons made between grades so that the most economical grade or mixture of grades may be used.
- 399 Anderson, L. O. CONSTRUCTION OF NU-FRAME RESEARCH HOUSE; UTILIZING NEW WOOD-FRAME SYSTEM. U. S. Forest Serv. Res. Paper FPL-88,38 p. Mar. 1968. A99.9 F7634U
- 400 Basile, J. V. AN ANNOTATED BIBLIOGRAPHY OF BITTERBUSH; PURSHIA TRIDENTATA, PURSH DC. U. S. Forest Serv. Res. Paper INT-44,27 p. 1967. A99.9 F764U
- 401 Burch, W. R. THE SOCIAL CHARACTERISTICS OF PARTICIPANTS IN THREE STYLES OF FAMILY CAMPING. U. S. Forest Serv. Res. Paper PNW-48,30 p., map. 1967. A99.9 F7625Uni  
Written for those concerned with the planning and management of wild-land resources for recreational areas. Some selected findings from a camper survey made on the Three Sisters and Lake of the Woods areas in Oregon are presented, including details about ages, family size, economic position, and attitudes of the participants in three different camping styles.
- 402 Rickard, W. M. ECONOMIC EVALUATION AND CHOICE IN OLD-GROWTH DOUGLAS-FIR LANDSCAPE MANAGEMENT. U. S. Forest Serv. Res. Paper PNW-49,33 p. Nov. 1967. A99.9 F7625Uni  
Present net worths for several timber cutting practices over a range of old-growth Douglas-fir stand conditions are presented. These practices are viewed as possible treatment alternatives where esthetic yield is also important.  
Two processes are proposed for instances where management decisions require simultaneous consideration of dollar and non-dollar consequences of alternative cutting practices: (1) the simple betterness method and (2) the compensation technique.
- 403 Wright, K. H., and Harvey, G. M. THE DETEIORATION OF BEETLE-KILLED DOUGLAS-FIR IN WESTERN OREGON AND WASHINGTON. U. S. Forest Serv. Res. Paper PNW-50,20 p. 1967. A99.9 F7625Uni  
Wood deterioration on a board-foot basis advanced from 3 percent 1 year after death to 79 percent after 11 years. Rate of deterioration is strongly related to age and tree size. Felling breakage is related to time since death and tree size. The fungus *Fomes pinicola* is the most important agent of deterioration. Salvage logging priorities should be influenced by age and size of timber, locality, accessibility, topography, and products to be manufactured.
- 404 Harris, A. S. NATURAL REFORESTATION ON A MILE-SQUARE CLEARCUT IN SOUTHEAST ALASKA. U. S. Forest Serv. Res. Paper PNW-52,16 p. 1967. A99.9 F7625Uni  
Bibliography, p. 16.
- 405 Bruce, D. TIMBER MEASUREMENT PROBLEMS IN THE DOUGLAS-FIR REGION OF WASHINGTON AND OREGON. U. S. Forest Serv. Res. Paper PNW-55,29 p. Feb. 1968. A99.9 F7625Uni  
Timber measurement problems in the Douglas-fir region were studied by consulting users of these measurements. This report summarizes current practices and the objectives and standards of performance of various users and discusses adequacy of current systems in light of these requirements.
- 406 Myers, C. A. GROWING STOCK LEVELS IN EVEN-AGED PONDEROSA PINE [PINUS PONDEROSA]. U. S. Forest Serv. Res. Paper RM-33,8 p. 1967. A99.9 F7632U  
Growth of ponderosa pine is under study in a coordinated investigation by the four western Experiment Stations of tree size, site index, and stand density will be determined. Results will be used to make forecasts of yield for possible alternatives of management.
- 407 Taylor, D. F. METEOROLOGICAL CONDITIONS OF THE HELLGATE FIRE. U. S. Forest Serv. Res. Paper SE-29,12 p. Nov. 1967. A99.9 F7623U  
Virginia.  
High temperatures, low humidities, and strong winds, resulting in a condition of EXTREME fire danger, were present when the Hellgate Fire began in the Pedlar District of the George Washington National Forest in the early afternoon of April 18, 1965. Convection was favored by the absolute instability of the airmass, and appears to have been triggered by the approach and passage of a pressure trough line. Eastward spread of the fire occurred at a rate of 110 chains per hour from 1400 to 1430 EST during the approach of the pressure trough line. Southward spread at a rate of 48 chains per hour occurred from 1430 to 1500 EST following its passage. Intensification of the fire was also favored by negative divergence and positive vorticity of the surface wind field.
- 408 Koch, P. LOCATION OF LAMINAE BY ELASTIC MODULUS MAY PERMIT MANUFACTURE OF VERY STRONG BEAMS FROM ROTARY-CUT SOUTHERN PINE VENEER. U. S. Forest Serv. Res. Paper SO-30,12 p. 1967. A99.9 F7628Us  
With further research it should be possible to construct 18-inch-deep, 25-foot-long beams that will justify assignment of an allowable MOE of 2,400,000 p.s.i. and an allowable bending stress of 3,470 p.s.i. These beams would be of log-run rotary-cut, thin, butt-jointed slash pine laminas arranged with the stiffest outermost in the highly stressed tension and compression zones and the most limber near the neutral axis.
- 409 Oswald, D. D. PRELIMINARY TIMBER RESOURCE STATISTICS FOR HUMBOLDT COUNTY, CALIFORNIA, JANUARY 1, 1967. U. S. Forest Serv. Res. Bull. PNW-23,8 p. 1968. A99.9 F7625U  
Summarizes preliminary findings of an inventory of Humboldt County's timber resources completed in 1966.
- 410 Moore, W. H. DEER BROWSE RESOURCES OF THE ATOMIC ENERGY COMMISSION'S SAVANNAH RIVER PROJECT AREA. U. S. Forest Serv. Res. Bull. SE-6,28 p. Dec. 1967. A99.9 F7623Ub

STATE AGRICULTURAL EXTENSION SERVICE  
PUBLICATIONS

Publications issued by the State Agricultural Extension Service are usually available from the issuing extension service, except where noted, and as long as the supply lasts. The National Agricultural Library does not distribute them.

Reproductions of material not available from the various State institutions may be ordered at regular Library rates from the United States Department of Agriculture, National Agricultural Library, Photoduplication Section, Washington, D.C., 20250.

## ENTOMOLOGY

Contains references chiefly on general entomology, and taxonomic and geographic entomology. Some references on pests of crops and products are included in the Bibliography, but for more detailed coverage of the literature on pests and their control, consult the Pesticides Documentation Bulletin, a biweekly publication of the National Agricultural Library.

In summary, new and expanding public health programs are providing significant opportunities to reach more mothers, children, and families with nutrition information and counseling. To make maximum and effective use of these opportunities, nutrition workers need to be receptive to new ideas, be willing to experiment and use innovative approaches, and build in provisions for ongoing evaluation.

## MISCELLANEOUS

Publications of the U. S. Department of Agriculture, State Agricultural Experiment Stations, and State Agricultural Extension Services on home management, personnel, and other subjects not ordinarily covered in the Bibliography of Agriculture will be included in this list.

## GENERAL

- 7800 American Chemical Society. ABSTRACTS OF PAPERS, 156TH NATIONAL MEETING, ATLANTIC CITY, NEW JERSEY, SEPTEMBER 8-13, 1968. Washington, 1968. various paging. 381 Am33Pa  
Includes papers relating to agricultural chemistry.
- 7801 Antalfi, A., and Tolg, I. CHANGE IN THE NATURE OF POND FISH BREEDING DUE TO ACCLIMATIZATION OF PLANT-EATING FISH. (Hu) Allat-tenyeszes 17(2):97-104. Ref. June 1968. 49 AL57  
English summary.
- Aggar, B. J. MOUNTAIN CLIMBING IN A LABORATORY. U. S. D. A. Yearbook Agr. 1968:307-310. 1 Ag84Y  
Determination of the structure of nucleic acid by the U. S. Plant, Soil and Nutrition Laboratory.
- 7802 Armstrong, D. L. FARMERS' PURCHASING PRACTICES. Carbondale, 1967. 31 p.  
(Southern Illinois University, Carbondale. School of Agriculture. Publication No. 23) 276 So83A no.23  
Farm supplies.
- 7803 Bennett, H., Bishop, J. L., and Wulfighoff, M. F. PRACTICAL EMULSIONS. Ed. 3. New York, Chemical Pub. Co., 1968. 2 vol. QC183.B4 1968  
Includes bibliographies.  
Contains chapters on agricultural emulsions (sprays) and food emulsions.
- 7804 Berinke, L. THE IMPORTANCE OF STATISTICAL METHODS USED IN TAXONOMIC INVESTIGATIONS. Budapest. Termeszettud. Muz. Evk. Ann. Hist.-Natur. Mus. Nat. Hung. 59:409-418. Ref. 1967. 410.9 B85E
- 7805 BOOK OF THE STATES 1968-1969, VOLUME XVII. Chicago, Illinois, Council of State Governments, 1968. 589 p., map. 280.9 B64  
A chapter on natural resources includes data on water resources, outdoor recreation, extension work, State agricultural and forestry research, soil and water conservation, and State forestry administration.
- 7806 Bowman, M. C., and Beroza, M. GAS CHROMATOGRAPHIC DETECTOR FOR SIMULTANEOUS SENSING OF PHOSPHORUS AND SULFUR-CONTAINING COMPOUNDS BY FLAME PHOTOMETRY. Anal. Chem. 40(10):1448-1452. Aug. 1968. 381 J825A  
In economic poisons analysis.
- 7807 British Solomon Islands Protectorate. Department of Agriculture. ANNUAL REPORT 1967. Honiara, 1968. 20 p. 25 B772
- 7808 Carvajal, J. CONSERVATION EDUCATION; A SELECTED BIBLIOGRAPHY. DeWille, Illinois, Interstate Printers & Publishers, 1968. 98 p. (Education. Key to conservation) Z7164.N3C3
- 7809 Culley, D. D., and Applegate, H. G. PESTICIDES AT PRESIDIO. IV. REPTILES, BIRDS, AND MAMMALS. Tex. J. Sci. 19(3):301-310. Ref. Nov. 3, 1967. 470 T31  
Toxicity.
- 7810 Curtis, H. BIOLOGY. New York, Worth Publishers, 1968. 854 p. QH308.C8  
Textbook.  
Includes bibliographies.
- 7811 DANISH BIOTECHNICAL REVIEW, EDITED BY J. KORSBAND. Ed. 4. Copenhagen, Biocentralen, Danish Society of Biotechnical Industry and Research, 1968. 141 p. 330.9 D22  
Research projects in biology, including the agricultural sciences.
- Dimler, R. J. DEXTRAN HELPS SAVE LIVES. U. S. D. A. Yearbook Agr. 1968:314-317.
- 1 Ag84Y U. S. Department of Agriculture research program which developed dextran as a blood plasma volume expander.  
Edwards, J. J. COMMUNITY SHELTER PLANNING. Ga. Univ. Ext. Leaf. 81.6 p.-folder. May 1968. 275.29 G29L
- 7812 Fisher, E. H. HOW TO DISPOSE OF WASTE PESTICIDES AND THEIR CONTAINERS. Hoard's Dairyman 113(14):825, 838. July 25, 1968. 44.8 H65  
Goebel, M. T. A WATER REPELLANT THROUGH SHEER CHANCE. U. S. D. A. Yearbook Agr. 1968:348-351. 1 Ag84Y  
Development of the Quilon chrome complex which protects various products.
- 7813 Hoffman, E. J. NEW DIMENSIONS IN MERCHANDISING AGRICULTURAL INPUTS. Wash. State Univ. Ext. E. M. 2888:13-16. Feb. 1968. 275.29 W27MI  
Retail.
- 7814 International Symposium on the Chemistry of Natural Products, 5th, London, 1968. ABSTRACTS. Oxford, Alden Press, 1968. 518 p. QD415.L5 1968  
Includes bibliographies.  
Issued by the International Union of Pure and Applied Chemistry.
- Jeanes, A. DEXTRAN BIBLIOGRAPHY. U. S. Agr. Res. Serv. ARS-71-36, 288 p. 1967.
- A381 R31Ac Karyluk, I. AGRICULTURAL SUPPLY NEEDS IMPROVEMENT. U. S. Joint Publ. Res. Serv. Transl. USSR Agr. 270:25-35. Aug. 5, 1968. (JPRS 46085) 173 J663Tso  
Translation from Material'no-Tekhnicheskoe Snabzhenie 5:42-47. 1968.  
Issued by CFSTI.
- 7816 Lantbrukskalender [AGRICULTURAL ALMANAC], 1968, v. 53. Stockholm, 1967. 327 p., map. 11 L292
- 7817 Lawrence, C. A. DISINFECTION, STERILIZATION, AND PRESERVATION. Philadelphia, Lea & Febiger, 1968. 808 p. RA761.L3  
Successor to Antiseptics, Disinfectants, Fungicides, and Chemical and Physical Sterilization, edited by G. Reddish and published in 1954 and 1957.  
Partial contents: Ch.30, Antiprotozoan and Anthelmintic compounds, by E. Leland; Ch.31, Mycobactericidal agents, by C. R. Smith; Ch.37, Preservatives for industrial products [wood and textile], by S. S. Block; Ch.38, Antimicrobial agents [fungicides] used in crop protection, by R. J. Lukens; Ch.39, Food preservatives, by C. G. Dunn.
- 7818 Lipp, R. C. MERCHANDISING AND SELLING SUPPLIES TO FARMERS; CUSTOMER SERVICES. Wash. State Univ. Ext. E. M. 2888:22-24. Feb. 1968. 275.29 W27MI  
Advertising techniques.

**BIBLIOGRAPHY OF AGRICULTURE**

Vol. 33

February 1969

No. 2

The Bibliography of Agriculture is an index to the literature of agriculture and the allied sciences received in the National Agricultural Library. Publications from any country are indexed, provided they are in one of the languages shown in CAPITALS at top of next column, or have summaries, abstracts, or translated titles in one of those languages.

Literature received more than one year after publication is generally not indexed. Exceptions are made for important scientific publications.

Indexing of articles on the processing of agricultural products is limited to those on primary processing.

Unsigned articles and those signed with pseudonyms or initials, editorials, letters to the editor, and columns appearing regularly, are omitted.

For more detailed coverage of the literature on pests and their control, please consult the Pesticides Documentation Bulletin, a biweekly publication of the National Agricultural Library.

#### FORMAT

The Bibliography is a classified arrangement of references under the following subjects:

- USDA Publications
- State Agricultural Experiment Station Publications
- State Agricultural Extension Service Publications
- Agricultural Economics and Rural Sociology
- Agricultural Products
- Animal Industry
- Engineering
- Entomology
- Food and Human Nutrition
- Forestry
- Plant Science
- Soils and Fertilizers
- Miscellaneous

The classified section is followed by the listing of:

- New Periodicals and Serials
- Translations
- Food and Agriculture Organization of the United Nations (FAO) Publications

The last section of each monthly issue, except November, is the Author and Subject index for that issue.

For monographs the title is shown in the original language, followed by the English version. Titles of foreign language articles in serial publications are given in English only; the language of the text is shown in abbreviated form in parentheses at the end of the title. The following notations are used:

(Af)	Afrikaans	(Ic)	Icelandic
(Al)	Albanian	(In)	Indonesian
(Ara)	Arabic	(It)	ITALIAN
(Arm)	Armenian	(Ja)	JAPANESE
(Az)	Azerbaijani	(Ka)	Kazakh
(Be)	Belorussian	(Ko)	KOREAN
(Bu)	Bulgarian	(La)	Latvian
(Bur)	Burmese	(Li)	Lithuanian
(Ch)	CHINESE	(No)	NORWEGIAN
(Cz)	CZECH	(Pe)	Persian
(Da)	DANISH	(Pol)	POLISH
(Du)	DUTCH	(Por)	PORTUGUESE
(Es)	Estonian	(Rum)	Rumanian
(Fi)	Finnish	(Rus)	RUSSIAN
(Fl)	Flemish	(Se)	SERBO-CROATIAN
(Fr)	FRENCH	(Si)	Siamese
(Ge)	GERMAN	(Sl)	Slovenian
(Geo)	Georgian	(Sp)	SPANISH
(Gre)	GREEK	(Sw)	SWEDISH
(He)	Hebrew	(Ta)	Tadzhik
		(Tu)	TURKISH
(Hu)	HUNGARIAN	(Uk)	UKRAINIAN

Abbreviated names of the publications cited prior to July 1, 1964 are those from USDA Miscellaneous Publication 765—List of Serials Currently Received in the Library of the United States Department of Agriculture, July 1, 1957. Abbreviated names of all new periodical titles received after July 1, 1964, are taken from the American Standard for Periodical Title Abbreviations. As time allows, abbreviations set up for titles before that date will be converted to the new form.

The presence of the term "Ref." in the citation indicates that the article contains ten or more references to the literature.

Following each citation is the Library classification number which should be used when requesting loans or reproduction of articles.

#### FREQUENCY OF PUBLICATION

The Bibliography is published monthly. The December issue is devoted wholly to a subject index and the cumulated Personal and Organizational index to the preceding eleven issues.

## AVAILABILITY OF REFERENCES CITED

### Loans

Most of the material in the National Agricultural Library collection may be borrowed by employees of the Department of Agriculture and by other libraries. In requesting loans, please include the library call number found at the end of the citation. Loan of periodicals is restricted to the Washington, D. C. area. Foreign statistical publications and rare books are loaned only by special arrangement.

### Free Distribution

U.S.D.A. publications. Domestic requests for publications of the United States Department of Agriculture will be filled free to libraries and other qualified agencies and organizations, as long as the supply lasts. (For ordering information, see Checklist of U.S.D.A. Publications in this issue.) Foreign institutions, organizations and agencies which issue publications may obtain U.S.D.A. publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange Unit, Washington, D. C., 20250.

State Agricultural Experiment Station and Extension Service publications. Publications issued by State Agricultural Experiment Stations and Extension Services are available except where noted, and as long as the supply lasts, from the issuing station or service. The National Agricultural Library does not distribute them; however, reproductions are available at regular Library rates.

### Technical Reports

Citations listed with the annotation "CFSTI" followed by price are also available for purchase from the Clearinghouse for Federal Scientific and Technical Information, U. S. Department of Commerce, Springfield, Virginia, 22151.

### Reproduction

All articles listed may be obtained in microfilm or photoprint form from the United States Department of Agriculture, National Agricultural Library, Photoduplication Section, Washington, D. C., 20250. Copying charges for each periodical or book are:

MICROFILMS: \$1.00 for each 30 pages or fraction copied from a single article or book.

PHOTOPRINTS: \$1.00 for each 4 pages or fraction copied from a single article or book.

RUSH SERVICE: Will be furnished upon payment of \$1.00 additional for each order.

Payment must accompany the order. Cash, Library coupons, check or money order drawn to the National Agricultural Library, U. S. D. A., are acceptable. Payment for orders originating outside of the United States should be made by international money order or draft on an American bank, or by UNESCO book coupons. Superintendent of Documents coupons and requests to furnish photocopy to be paid from Superintendent of Documents Deposit funds cannot be honored. Credit may be extended only to Government agencies and institutions. Billing address should be indicated.

### Library Coupons

National Agricultural Library coupons, valued at \$1.00 each, may be purchased in any quantity.

-----  
PLEASE GIVE COMPLETE BIBLIOGRAPHIC INFORMATION AS IT APPEARS IN THIS PUBLICATION FOR EACH ITEM REQUESTED.  
-----

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C., 20402  
\$26.50 per year, domestic; \$33.25 per year, foreign. Single copies vary in price.

Use of funds for printing this publication approved by the Director of the Bureau of the Budget (January 3, 1969).

## CHECKLISTS

Checklists of publications of the U. S. D. A., State Agricultural Experiment Stations, and State Agricultural Extension Services are prepared for the convenience of those who wish to follow the literature from these sources. All such publications are included also in the classified section and indexed in the author and subject indexes.

Abstracts are included with citations of U. S. D. A. publications, provided they are brief and are received with the original publication.

U. S. D. A. PUBLICATIONS

Publications in the various United States Department of Agriculture series are listed first, followed by publications issued by the various agencies within the Department, arranged alphabetically by name of agency.

Domestic requests for publications in the various Department series will be filled free to libraries and other qualified agencies and organizations upon application to the United States Department of Agriculture, Office of Information, Washington, D.C., 20250, as long as the supply lasts. They may also be purchased from the Superintendent of Documents, Washington, D.C., 20250.

Domestic requests for most publications issued by the Department will be filled free by the issuing agency, as long as the supply lasts. Requests should be addressed to the United States Department of Agriculture, name of the specific issuing agency, Washington, D.C., 20250.

Foreign governments, institutions and agencies which issue publications, may obtain United States Department of Agriculture publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange Unit, Washington, D.C., 20250.

For further information about the availability of United States Department of Agriculture publications, consult U.S.D.A. List Number 11, List of Available Publications of the United States Department of Agriculture, obtainable from the United States Department of Agriculture, Office of Information, Washington, D.C., 20250, and for sale by the Superintendent of Documents, Washington, D.C., 20402.

- 7951** Adelson, S. F. CHANGES IN DIETS OF HOUSEHOLDS, 1955 TO 1965; IMPLICATIONS FOR NUTRITION EDUCATION TODAY. Nutr. Program News., May/June 1968:1-8. 1.982 AZN955
- 7952** Latham, A. J., and Amling, H. J. A NEW LEAFSPOT DISEASE OF PECAN INCITED BY CRISTULARIELLA PYRAMIDALIS IN ALABAMA AND GEORGIA. Plant Dis. Rep. 52(10):747. Oct. 1968. 1.9 P69P
- 7953** Lamberti, F. THE EFFECT OF CROPPING ON THE POPULATION LEVELS OF LONGIDORUS AFRICANUS. Plant Dis. Rep. 52(10):748-750. Oct. 1968. 1.9 P69P

In lath-house and greenhouse tests *Longidorus africanus* Merny reached the highest population levels in soils cropped 5 months with sugarbeet. Increases, with respect to the initial population levels, occurred also in soils cropped with sorghum, Bermuda grass, lettuce, eggplant, spinach, fig, tomato, grape and mint. With all the other plants tested, the initial level decreased, although the nematode maintained levels statistically higher (except alfalfa and carrot) than the fallow treatment.

A test carried out with field soil from which no larval or adult stages of the nematode could be recovered suggested that the egg is the survival stage of *L. africanus*.

- 7954** Spencer, J. A. A NEW LEAF-STREAK DISEASE OF *HEMEROCALLIS* SPP. Plant Dis. Rep. 52(10):751-753. Oct. 1968. 1.9 P69P  
Caused by *Gloecephalus hemerocalli*, n. g., n. sp.; a tentative name with no taxonomic description.  
A new leaf-streak disease of daylily (*Hemerocallis* spp.) is reported. The disease is caused by a previously undescribed fungus which produces necrotic spotting and streaking of leaves.
- 7955** Hammett, K. R. W. ROOT APPLICATION OF A SYSTEMIC FUNGICIDE FOR CONTROL OF POWDERY MILDEWS. Plant Dis. Rep. 52(10):754-755. Oct. 1968. 1.9 P69P  
Tests with vegetables, apples and wheat.  
Root application of experimental fungicide 1-(butylcarbamoyl)-2-benzimidazole carbamic acid, methyl ester resulted in eradication and prevention of powdery mildew infection of *Cucumis sativus*, *Cucurbita pepo*, *Triticum aestivum*, *Lathyrus odoratus*, and *Cyphomandra betacea*. The effect was produced at concentrations as low as 0.0017 gram of product in 400 cc of rooting medium. Phytotoxic symptoms are reported for *C. sativus* and *C. pepo* grown in concentrations of 0.1 gram of product in 400 cc of rooting medium. Protection against apple powdery mildew was not demonstrated. Several methods of application, including seed treatments, were investigated.
- 7956** Purcifull, D. E. OCCURRENCE OF A TURNIP MOSAIC VIRUS IN FLORIDA. Plant Dis. Rep. 52(10):759-760. Ref. Oct. 1968. 1.9 P69P  
A mechanically transmissible virus was isolated from a naturally infected turnip showing a leaf mosaic. The virus was a flexuous rod 755-785 nm long, was stylet-borne by aphids, and induced cytoplasmic inclusion bodies in cruciferous hosts. These properties, plus serological tests, showed that the mosaic disease was caused by turnip mosaic virus.
- 7957** Thomas, C. E., and Webb, R. E. TEXAS SPINACH VIRUSES. Plant Dis. Rep. 52(10):761-763. Oct. 1968. 1.9 P69P  
Beet curly-top virus (BCTV), spinach yellow-dwarf virus (SYDV), and tobacco ringspot virus (TRSV) were found to be the most prevalent spinach viruses in Texas during the 1966-67 season. SYDV and TRSV were the most prevalent in 1967-68. Cucumber mosaic virus (CMV) was rarely found. Total virus infection in some fields ranged to 65%. Beet curly-top was usually more prevalent in the Lower Rio Grande Valley than the Winter Garden area. SYDV, TRSV, and CMV were more prevalent in the Winter Garden area. Early spinach plantings exhibited higher rates of infection by the viruses encountered, except CMV. Smooth-leaf spinach varieties in each area were attacked more frequently by the viruses except BCTV which was found with similar frequency in both savoy- and smooth-leaf types.
- 7958** Christie, S. R., Edwardson, J. R., and Zettler, F. W. CHARACTERIZATION AND ELECTRON MICROSCOPY OF A VIRUS ISOLATED FROM BIDENS AND *LEPIDIDIUM*. Plant Dis. Rep. 52(10):763-768. Ref. Oct. 1968. 1.9 P69P  
A previously undescribed virus isolated from *Bidens pilosa* and *Lepidium virginicum* designated *Bidens mottle virus* has been shown to be mechanically transmissible to five of eight plant families tested. The virus was transmitted in the nonpersistent manner by four of the five aphid species tested. Eighty-five percent of 738 flexuous rod particles in purified preparations were 700 to 760 nm in length. Cytoplasmic inclusions in virus-infected tissues were observed with light and electron microscopy. Negatively stained extracted inclusions exhibited striations. Ultrathin sections of virus-infected plants contained cylindrical cytoplasmic inclusions. The data obtained in this study indicate that the *Bidens mottle virus* should be assigned to the PVY group.
- 7959** Miller, P. M. THE SUSCEPTIBILITY OF PARASITIC NEMATODES TO SUB-FREEZING TEMPERATURES. Plant Dis. Rep. 52(10):768-772. Ref. Oct. 1968. 1.9 P69P  
Plant parasites.  
Exposure for 24 hours to -15°C killed 99% of adults and larvae of *Pratylenchus penetrans* and 75 to 90% of adults and larvae of *Tylenchorynchus claytoni*, *Paratylenchus hamatus*, *Xiphinema americanum*, and *Rotylenchus robustus*. All of these nematodes were killed completely by a similar exposure to -43°C. Infection from cysts of *Heterodera tabacum* was about 20% less after exposure for 14 days to -15° or -27° but was prevented completely by exposure for 24 hours or longer to -43°C. Prior exposure of the cysts to -15° for 48 hours greatly reduced killing by subsequent exposure to -43°. Between 75 and 85% of *P. penetrans* did not survive 2 weeks at -4°; but the time required to kill this percentage shortened rapidly even with a slight drop in the temperature, as for example 4 hours at -9° killed twice as many *P. penetrans* as 24 hours at -4°. Adults and fourth-stage larvae were the most abundant overwintering stages of *P. penetrans*.
- 7960** Subramanian, S., and Govindarajan, T. S. A NEW ROOT ROT OF COFFEE IN INDIA. Plant Dis. Rep. 52(10):773-774. Ref. Oct. 1968. 1.9 P69P  
During an examination of diseased coffee plant material in the Central Coffee Research Institute estate, a new root rot disease of coffee was noticed. Low soil pH and high temperature were found to be predisposing factors to the disease. The causal agent was identified as *Cylindrocarpon tenue* Bugn. This is a new record.
- 7961** Anzalone, L., and Lamey, H. A. POSSIBLE DIFFERENTIAL REACTION OF CERTAIN RICE VARIETIES TO SUGARCANE MOSAIC VIRUS. Plant Dis. Rep. 52(10):775-777. Oct. 1968. 1.9 P69P  
Our test demonstrated a wide range in susceptibility of cultivated rice varieties to four strains of sugarcane mosaic virus. The varieties Berlin, British Guiana No. 79, Jajulla, No. 721 (PI 245717), and Pandhori No. 4 showed promise for differentiating strains A, B, D, and H of the virus.
- 7962** Gutter, Y. SCREENING TRIALS FOR CONTROL OF GREEN MOLD IN VALENCIA ORANGES. Plant Dis. Rep. 52(10):777-779. Oct. 1968. 1.9 P69P  
Several new antifungal compounds were tested for their effectiveness in controlling decay of Valencia oranges artificially inoculated with spores of *Penicillium digitatum*. Treatments with 5-aceto-8-hydroxyquinoline-sulfate, a formulation of sebacetyl ammonium acetate, and warm 2,6-dichloro-4-nitroaniline gave encouraging results. Didecyl-dimethyl-ammonium bromide showed only poor activity, and three other materials tested did not reduce the incidence of decay, although they exhibited marked antifungal properties in *in vitro* studies.
- 7963** Pinckard, J. A., and Guidroz, G. A PARASITIC PHYTOPHthora BOLL ROT OF COTTON FOUND IN LOUISIANA. Plant Dis. Rep. 52(10):780-781. Oct. 1968. 1.9 P69P
- 7964** Al-Beldawi, A. S., and Pinckard, J. A. 1-(BUTYL-CARBAMOIYL)-2-BENZIMIDAZOLE CARBAMIC ACID, METHYL ESTER, A SYSTEMIC FUNGICIDE EFFECTIVE AGAINST RHIZOCTONIA SOLANI ON COTTON SEEDLINGS. Plant Dis. Rep. 52(10):781-784. Oct. 1968. 1.9 P69P  
1-(Butylcarbamoyl)-2-benzimidazole carbamic acid, methyl ester (du Pont Fungicide 1991) (D-1991) showed systemic activity in cotton seedling hypocotyls against *Rhizoctonia solani* Kuehn. Seedlings growing in aqueous suspensions of D-1991 were protected for at least 15 days while their roots were immersed in concentrations of 5, 10, 20, 40, and 80 ppm, respectively. Some protection against postemergence damping-off, in containers of autoclaved field soil, occurred when seedlings were grown in soil containing 10, 20, 40, 80, and 160 ppm, respectively. Complete protection was never quite obtained. No phytotoxicity of the test chemical was noted at the concentrations used. It is suggested that D-1991 be further explored in field tests for control of *Rhizoctonia* seedling blight of cotton.

- 7965 Patil, L. K., and Moniz, L. A NEW LEAF BLIGHT DISEASE OF PAPAYA IN INDIA. *Plant Dis. Rep.* 52(10):784-785. Oct. 1968. 1.9 P69P  
A new leaf blight disease of *Carica papaya* not previously reported in the literature is described. The disease is caused by *Helminthosporium rostratum* Drechsler, and produces blight and defoliation of affected plants.
- 7966 Birchfield, W. EVALUATION OF NEMATOCIDES FOR CONTROL OF RENIFORM NEMATODES ON COTTON. *Plant Dis. Rep.* 52(10):786-789. Ref. Oct. 1968. 1.9 P69P  
Several nematocides were imposed on two varieties of cotton for control of the reniform nematode, *Rotylenchulus reniformis*, during the past 5 years. The best reniform nematode control and highest cotton yields were obtained with the following nematocides: 1,2-dibromo-3-chloropropane; 1,2-dichloropropene and 1,2-dichloropropene mixture; 1,3-dichloropropene and related C<sub>3</sub> hydrocarbons; O,O-diethyl S-[2-(ethylthio)ethyl] phosphorodithioate-PCNB mixture; 2-methyl-2-(methylthio) propionaldehyde O-(methyl-carbamoyl)oxime; O,O-diethyl O-(p-methylsulfinyl)phenyl phosphorothioate; O and ethyl S,S-dipropyl phosphorodithioate.
- 7967 Zentmyer, G. A., Mircetich, S. M., and Mitchell, D. M. TESTS FOR RESISTANCE OF CA-CAO TO PHYTOPHTHORA PALMIVORA. *Plant Dis. Rep.* 52(10):790-791. Oct. 1968. 1.9 P69P
- 7968 Klarman, W. L. CONIOTHYRIUM CANKER ON ORNAMENTAL PEAR. *Plant Dis. Rep.* 52(10):792. Oct. 1968. 1.9 P69P
- 7969 Kingsland, G. C. BARLEY SEED GERMINATION MAY BE REDUCED DURING STORAGE FOLLOWING ANAEROBIC TREATMENT. *Plant Dis. Rep.* 52(10):792-793. Oct. 1968. 1.9 P69P  
Method of controlling *Ustilago nuda*.  
Anaerobic treatment of "Early Marconee" barley seeds was responsible for a 20% decrease in germination during the first year subsequent to treatment, as compared with a 10% reduction in untreated seeds. Germination of treated seeds had decreased to almost 0 at the end of the second year after treatment, whereas germination of untreated seeds was about 50% of original germination.
- 7970 McCrum, R. C. PRUNUS VIRGINIANA, A NATURAL HOST FOR A MOSAIC VIRUS OF APPLE. *Plant Dis. Rep.* 52(10):794. Oct. 1968. 1.9 P69P
- 7971 Malek, R. B. THE DAGGER NEMATODE, XIPHINEMA AMERICANUM, ASSOCIATED WITH DECLINE OF SHELTERBELT TREES IN SOUTH DAKOTA. *Plant Dis. Rep.* 52(10):795-798. Ref. Oct. 1968. 1.9 P69P  
*Xiphinema americanum* Cobb was found in the soils of 95% of shelterbelts sampled in South Dakota and in association with all commonly planted tree species. Its frequent abundance, particularly in weed-free belts, and an apparent relationship between tree condition and associated nematode numbers indicate that *X. americanum* is a serious parasite of trees in the upper Great Plains and may be directly contributing to stunting, dieback, and premature decline of shelterbelt trees in this State. Nine other genera of parasitic nematodes were encountered, but only *Tylenchorhynchus acutus* and *Paratylenchus* spp. could be considered contributors to tree unthriftiness.
- 7972 Williams, E. B., and Brown, A. G. A NEW PHYSIOLOGIC RACE OF VENTURIA INAEQUALIS, INCITANT OF APPLE SCAB. *Plant Dis. Rep.* 52(10):799-801. Oct. 1968. 1.9 P69P  
A new physiologic race of *Venturia inaequalis* has been identified and designated as race 5. This race is differentiated by the pit gene type of resistance present in *Malus micromalus* and *M. microcarpa* 804. A second gene for resistance in *M. microcarpa* was found to be closely linked with the pit gene type and its effect was masked by this type of gene expression.
- 7973 Fisher, K. D., and Picarelli, C. J. OCCURRENCE OF A YELLOW-ROOT ROT OF SPINACH IN THE UPPER CONNECTICUT RIVER VALLEY. *Plant Dis. Rep.* 52(10):801-803. Oct. 1968. 1.9 P69P  
A yellow-root rot symptom pattern was identified in spinach planted in old potato soils of the Upper Connecticut River Valley. Neither *Fusarium oxysporum* f. *spinaceae* nor cucumber mosaic virus was found to be causally related to the condition. A *Fusarium solani* pathogenic to Irish potato was isolated from necrotic roots. It is thought to be a secondary invader, following severe root injury associated with nutrient stress.
- 7974 Hawksworth, F. G., and Staley, J. M. RHIZOSPHERA KALKHOFFII ON SPRUCE IN ARIZONA. *Plant Dis. Rep.* 52(10):804-805. Oct. 1968. 1.9 P69P  
The needle cast fungus, *Rhizosphaera kalkhoffii* Bubb., is damaging to planted blue spruce, *Picea pungens*, in many parts of the world, but it was not previously known in native blue spruce stands. It also attacks native Engelmann spruce, *P. engelmannii*, a new host for the fungus. Damage to spruce stands in Arizona is negligible.
- 7975 Gabrielson, R. L., Haglund, W. A., and Tompkins, D. R. CUCUMBER DAMPING-OFF AS AFFECTED BY PETROLEUM MULCH, FUNGICIDES, AND THEIR METHODS OF APPLICATION. *Plant Dis. Rep.* 52(10):806-810. Ref. Oct. 1968. 1.9 P69P  
Band treatments and surface incorporation of 1-chloro-2-nitropropane or sodium p-(dimethylamino)benzenediazosulfonate alone, or combined with petroleum mulch, significantly reduced damping-off caused by *Pythium ultimum* Trow and caused an increased growth response. In-furrow treatments were less effective. Banded petroleum mulch alone speeded emergence, in some cases reduced damping-off, increased weed growth, and usually produced an increased growth response. Band-incorporation is discussed as a low cost method of achieving the fumigation growth response.
- 7976 Lawrence, F. J., and Müller, P. W. EFFECTS OF VIRUS INFECTION ON THE STRAWBERRY CULTIVAR NORTHWEST. *Plant Dis. Rep.* 52(10):811-813. Oct. 1968. 1.9 P69P  
The number of runners on the strawberry cultivar Northwest was significantly reduced by mild yellow edge, crinkle, mild yellow edge plus mottle, and mild yellow edge plus crinkle, respectively, but not by mottle alone.  
Under the conditions of this experiment, there was no significant effect on the number of crowns, the number of flowers, the dry weights of the leaves, and roots and crowns, respectively.  
The mottle virus is apparently the least injurious of all the virus components in the Northwest cultivar.
- 7977 Obrero, F. P., and Trujillo, E. E. CONTROL OF POWDERY MILDEW OF PAPAYA. *Plant Dis. Rep.* 52(10):814-816. Oct. 1968. 1.9 P69P  
Combinations of a mixture of 2-(1-methylheptyl)-4,6-dinitrophenol and 2-(1-methylheptyl)-4,6-dinitrophenyl crotonate—coordination product of zinc ion and maneb (Kar.-zinc a maneb) and 6-methyl-2,3-quinoxaline-dithiol cyclic carbonate—coordination product of zinc ion and maneb (Mor.-zinc a maneb) were tested for the control of powdery mildew of papaya. Excellent control was obtained with mixtures of 1/4 lb Kar.-1, 2 lb zinc a maneb plus 12 oz of Triton B-1956 to 100 gallons of water per acre. Higher rates of Kar. and spray pressures above 100 psi were found injurious to papaya. Oidium caricae was found to be highly hydrophobic. A high ratio of surfactant in the fungicide mixture was necessary to wet the pathogen.
- 7978 Beniwal, S. P. S., and Srivastava, S. K. DOWNY MILDEW OF LENTIL (LENS ESCULENTA). *Plant Dis. Rep.* 52(10):817-818. Oct. 1968. 1.9 P69P  
Caused by an unidentified *Peronospora* sp.
- 7979 Pool, R. A. F., and Sharp, E. L. DISTRIBUTION OF CEPHALOSPORIUM [GRAMINEUM] STRIPE DISEASE OF WHEAT IN MONTANA. *Plant Dis. Rep.* 52(10):818-819. Oct. 1968. 1.9 P69P
- 7980 Hinds, T. E., Davidson, R. W., and Lombard, F. F. DECAY OF ENGLMANN SPRUCE [PICEA ENGELMANNII] BY LENTINELLUS MONTANUS IN COLORADO. *Plant Dis. Rep.* 52(10):820-821. Oct. 1968. 1.9 P69P  
A series of cultures isolated between 1944 and 1956 from decayed wood in living Engelmann spruce and lodgepole pine in Colorado have been identified as *Lentinellus montanus* O. K. Miller, which was described in 1965. The fungus causes a white rot which is usually associated with old fire scars and is described as a yellow stringy butt rot of the heartwood.
- 7981 Toole, E. R. WETWOOD IN COTTONWOOD [POPULUS DELTOIDES]. *Plant Dis. Rep.* 52(10):822-823. Oct. 1968. 1.9 P69P  
In 13 stands along the Mississippi River between Vicksburg and Memphis, 86% of the cottonwoods over 6 inches in diameter contained wetwood. Wetwood had higher moisture content and pH than normal sapwood. Gas pressure in affected trees was as high as 25.5 psi. A rod-shaped, gram-negative bacterium was consistently isolated from the wetwood.

- 7992 Walton, G. S. BORON TOXICITY ON CHRYS-  
ANTHEMUMS. Plant Dis. Rep. 52(10):824. Oct.  
1968. 1.9 P69P
- 7993 Granek, I. KEYS TO THE HETERODERA  
"GROUP" AND SPECIES OF THE HETEROD-  
ERA ROSTOCHIENSIS "GROUP." Plant Dis. Rep. 52(11):  
827-828. Nov. 1968. 1.9 P69P  
Plant nematodes.
- 7994 Zalasky, H., Fenn, O. K., and Lindquist, C. H.  
REACTIONS OF POPLARS TO INFECTION BY  
SEPTORIA MUSIVA AND DIPLODIA TUMEFACIENS AND  
TO INJURY BY FROST IN MANITOBA AND SASKAT-  
CHEWAN. Plant Dis. Rep. 52(11):829-833. Ref. Nov.  
1968. 1.9 P69P  
Disease incidence varied from very light to  
very high in 28 poplar clones that were artificially inocu-  
lated with *Diplodia tumefaciens*. The least susceptible  
clones were *Populus deltoides* cultivars FNS44-52, *Robus-  
ta Vernirubens*, *Robusta Bachelieri*, *Serotina de Selys*,  
and *Northwest*. With few exceptions, however, the disease  
incidence was high in the 12 clones that were naturally in-  
fected with *Septoria musiva*; *P. sargentii* was the least  
susceptible. Brooks-1, Northwest *P. x petrowskiana* and  
Volunteer appeared to be resistant to winter injury.
- 7995 Nariani, T. K., Raychaudhuri, S. P., and Shar-  
ma, B. C. EXOCORTIS IN CITRUS IN INDIA.  
Plant Dis. Rep. 52(11):834. Nov. 1968. 1.9 P69P
- 7996 Bagga, H. S. A SIMPLE TECHNIQUE FOR  
EVALUATING SYSTEMIC FUNGICIDES AND  
INSECTICIDES FOR CONTROL OF COTTON BOLL ROT.  
Plant Dis. Rep. 52(11):835-837. Nov. 1968. 1.9 P69P  
A simple laboratory technique was developed  
for preliminary evaluation of systemic compounds against  
cotton boll rot. The technique involved the use of a half-  
pint fruit jar containing the solution of the systemic com-  
pound with the pedicel of a cotton boll immersed in the  
solution while the boll rested on the screen. The tech-  
nique was evaluated by using four fungicides, and six  
insecticides.
- 7997 Ruehle, J. L. PLANT-PARASITIC NEMATODES  
ASSOCIATED WITH SOUTHERN HARDWOOD  
AND CONIFEROUS FOREST TREES. Plant Dis. Rep. 52  
(11):837-839. Nov. 1968. 1.9 P69P  
A geographical tabulation is presented to show  
new plant-parasitic nematode associations with southern  
forest hardwoods and conifers other than pines. It was  
compiled from results of a general nematode survey  
started by the Forest Service in 1961.
- 7998 Horst, R. K., and Nelson, P. E. LOSSES FROM  
FUSARIUM STEM ROT CAUSED BY FUSARIUM  
ROSEUM, IN COMMERCIAL PRODUCTION OF CUTTINGS  
OF CARNATION, DIANTHUS CARYOPHYLLUS. Plant  
Dis. Rep. 52(11):840-843. Nov. 1968. 1.9 P69P  
Data on incidence of *Fusarium* stem rot of car-  
nation, *Dianthus caryophyllus*, were maintained over a  
period of 2 years. Information was obtained concerning  
losses in different stages of stock culture propagation  
along with plant age of diseased plants for a large number  
of carnation cultivars. Losses were found to vary with  
plant age. Greater losses were found in plants 1-13 weeks  
old than in 1-year-old plants. Control methods and their  
importance are discussed.
- 7999 Brown, G. E. EXPERIMENTAL FUNGICIDES  
APPLIED PREHARVEST FOR CONTROL OF  
POSTHARVEST DECAY IN FLORIDA CITRUS FRUIT.  
Plant Dis. Rep. 52(11):844-847. Nov. 1968. 1.9 P69P  
Thiabendazole, 2-(4'-thiazolyl)benzimidazole  
(TBZ), and 1-(butylcarbamoyl)-2-benzimidazole carbamic  
acid, methyl ester (Fungicide 1991) applied 1 week before  
harvest reduced decay in "Hamlin" oranges during stor-  
age. Decay control with Fungicide 1991 was outstanding in  
this test as well as in trials involving preharvest applica-  
tions to "Robinson" tangerines and "Pineapple" and  
"Valencia" oranges. Control of decay was evident in  
Valencia oranges when fruits were harvested 5 weeks after  
Fungicide 1991 application. Feasibility is discussed  
concerning preharvest fungicide applications for the control  
of postharvest decay.
- 7990 Burton, C. L. SOUTHERN CORN LEAF  
BLIGHT ON SWEET CORN EARS IN TRANSIT.  
Plant Dis. Rep. 52(11):847-851. Nov. 1968. 1.9 P69P  
Southern corn leaf blight, caused by the imper-  
fect stage of *Cochliobolus heterostrophus* Drechs., was  
reported for the first time on sweet corn ears shipped to  
the midwest from Florida. Studies on the pathogenicity of  
the causal agent in relation to temperature, time of devel-  
opment, and methods of inoculation are described. Tem-  
peratures between 75° and 95°F favored rapid growth of  
the pathogen on ears; 85° was optimum. At 85° symptoms  
of disease development could be observed as early as 3  
days, regardless of inoculation methods; however, those  
temperatures that favored the growth of *C. heterostrophus*  
also favored the rapid development of contaminants natu-  
rally found on market corn. Experimentation showed that  
neither time, temperature, nor method of inoculation were  
sufficient cause per se to account for the presence of *C.  
heterostrophus* infection in this shipment. The disease was  
probably present and went unobserved at the time of ship-  
ment.
- 7991 Mankau, R. EFFECT OF NEMATOCIDES ON  
NEMATODE-TRAPPING FUNGI ASSOCIATED  
WITH THE CITRUS NEMATODE. Plant Dis. Rep. 52(11):  
851-855. Nov. 1968. 1.9 P69P  
The nematocidal 1,3-dichloropropene-1,2-di-  
chloropropane (DD) markedly reduced recovery of nema-  
tode-trapping fungi in citrus soil while 1,2-dibromoethane  
(EDB) caused a temporary effect and 1,2-dibromo-3-chlo-  
ropropane (DBCP) was not fungitoxic in outdoor microplot  
tests. In vitro, seven predacious fungus species were  
killed by sodium methylthiocarbamate (SMDE), DD,  
chloropicrin, 1,3-dichloropropene, and a mixture of DD  
and methyl isothiocyanate saturated atmospheres. Atmos-  
pheres saturated with DBCP were moderately fungistatic,  
and with EDB they were strongly fungistatic but not lethal.
- 7992 Rowell, J. B. CONTROL OF LEAF AND STEM  
RUSTS OF WHEAT BY COMBINATIONS OF  
SOIL APPLICATION OF AN 1,4-OXATHIN DERIVATIVE  
WITH FOLIAGE SPRAYS. Plant Dis. Rep. 52(11):856-  
858. Nov. 1968. 1.9 P69P  
*Puccinia graminis tritici*.  
Treatment with 2,3-dihydro-5-carboxanilido-6-  
methyl-1,4-oxathin-4,4-dioxide (DCMOD) in the seed fur-  
row at planting followed by sprays of DCMOD at mid-sea-  
son gave moderate control of leaf and stem rusts on  
spring wheat. Combined treatments of in-furrow applica-  
tions of DCMOD with late-season sprays of the formula-  
tion containing the product of zinc ion and manganous  
ethylenebis(dithiocarbamate) plus nickel sulfate hexahy-  
drate controlled rust better than late-season sprays of the  
latter formulation alone. Thus, control of the early stages  
of the development of rust epidemics on wheat by DCMOD  
applied at planting appears to be a promising means of  
increasing the effectiveness of foliage sprays applied  
late in the season.

- 7994 Sabar, Z., and Shalla, T. A. PRODUCTION OF  
PLANT VIRUS ANTISERUM IN A HORSE.  
Plant Dis. Rep. 52(11):860-862. Nov. 1968. 1.9 P69P  
A *Conemerra* stallion was immunized by in-  
jections of increasing amounts of purified tobacco mosaic  
virus (TMV). Over a period of 12 weeks a total of about  
800 mg of TMV was injected. Approximately 19 liters of  
blood were obtained during a period of 15 weeks, yielding  
about 8 liters of antiserum having a titer of about 1/1024.  
This antiserum compared favorably with Anti-TMV ob-  
tained from rabbits. No ill effects were observed in the  
horse during immunization and bleeding periods. The cost  
of the Anti-TMV obtained from the horse was not higher  
than could be expected if rabbits were used and the  
amount of labor involved was considerably less.

7995 Williams, L. E., and others. SEED TRANS-MISSION STUDIES OF MAIZE DWARF MOSAIC VIRUS IN CORN. Plant Dis. Rep. 52(11):863-864. Nov. 1968. 1.9 P69P

W. R. Findley, E. J. Dollinger, and R. M. Ritter, joint authors.

Only two of 29,735 seedlings from seed harvested from maize dwarf mosaic virus-infected plants were found to contain virus. Dent corn inbreds and single crosses and sweet corn and popcorn hybrids were included in the 477 strains tested. Seeds planted were from plants infected in the field but probably only MDMV type "A" was involved.

7996 Blampied, G. D., and Purnasiri, A. PENICILLIUM AND BOTRYTIS ROT OF MCINTOSH APPLES HANDLED IN WATER. Plant Dis. Rep. 52(11):865-867. Nov. 1968. 1.9 P69P

A survey of inoculum level in water tanks used to handle apples in packing-houses showed that levels of 7,000-13,000 total germinated propagules per ml of water were common; levels of 1,000-7,000 germinated *Penicillium expansum* propagules per ml of water were common.

The relationship between the levels of *Penicillium expansum* and *Botrytis* sp. spores in water tanks and rot incidence was studied. As the storage season progressed, the incidence of rot increased at each level of inoculum tested.

7997 Blampied, G. D., and Purnasiri, A. THIABENDAZOLE CONTROL OF PENICILLIUM [EX-PANSUM] ROT OF MCINTOSH APPLES. Plant Dis. Rep. 52(11):867-871. Nov. 1968. 1.9 P69P

Storage.

The effectiveness of thiabendazole, 2-(4'-thiazolyl)benzimidazole (TBZ), in the control of *Penicillium* rot of McIntosh apples was found to be related to the level of inoculum, the concentration of TBZ, the length of the time interval between exposure to the inoculum and treatment with TBZ and the length of the 70°F holding period.

7998 John, V. T. IDENTIFICATION AND CHARACTERIZATION OF TUNGRO, A VIRUS DISEASE OF RICE IN INDIA. Plant Dis. Rep. 52(11):871-875. Nov. 1968. 1.9 P69P

A disease resembling tungro in symptoms, vector acquisition and inoculation feeding periods, incubation of the virus in the vector and host, nonpersistence of the virus in the vector, and reaction to a differential variety is reported. It is concluded that tungro is present in India, and its affinity to a similar disease, leaf yellowing, is discussed.

7999 Zimmer, D. E., and Urie, A. L. INFLUENCE OF FOLIAGE RUST ON YIELD, TEST WEIGHT, AND OIL PERCENTAGE OF SAFFLOWER SEED. Plant Dis. Rep. 52(11):876-878. Nov. 1968. 1.9 P69P

Rust (*Puccinia carthami* Cda.) was introduced into field-plots of safflower (*Carthamus tinctorius*) at the time of planting, and controlled throughout the season in half of the plots of each variety or line by foliar applications of a maneb fungicide. In 1963, 1964, and 1966 heavy rust infection was limited to the lower leaves of the unsprayed plots until after full bloom and did not significantly reduce seed yield, test weight, or oil percentage of the seed. Heavy infection of both lower and upper leaves in the unsprayed plots occurred prior to full bloom in 1965 and significantly reduced yield of the rust-susceptible entries. Yield of some susceptible varieties and lines was reduced more than the yield of others. Although not significant, oil percentage of seed harvested from rusted plots tended to be slightly higher than the oil percentage of seed harvested from unrusted plots.

8000 Nelson, R. R., and Kline, D. M. OCCURRENCE IN COCHLIOBOOLUS HETEROSTROPHUS OF CAPACITIES TO BLIGHT GRAMINEOUS HOSTS. Plant Dis. Rep. 52(11):879-882. Nov. 1968. 1.9 P69P

One hundred and fifty isolates of *Cochliobolus heterostrophus* Drechs. from diverse geographic areas and source hosts were tested for their capacities to induce blight or lesion reactions on 34 gramineous test species. Twenty-seven isolates induced blight reactions on single hosts and 16 additional isolates blighted from 2 to 7 species. There were 26 different single hosts and combinations of 2 or more hosts exhibiting blight symptoms, indicating that a number of blight mechanisms are operative among the various isolates. The possible relationship between blight-inducing abilities and toxin mechanisms is discussed.

8001 Skelly, J. M., Carroll, R. B., and Lukezic, F. L. A NEW DISEASE OF CROWNVETCH, CORONILLA VARIA, CAUSED BY SCLEROTINIA TRIFOLIORUM. Plant Dis. Rep. 52(11):882-886. Nov. 1968. 1.9 P69P

A new disease of crownvetch plants was observed at several locations in central Pennsylvania during the summers of 1965, 1966, and 1967. Initially, symptoms consisted of a general chlorosis of the foliage. This was followed by wilting and death of the entire aboveground portion of the plants, accompanied by a basal rot of the stems. Dead stems were found to contain sclerotia. Numerous isolations from necrotic tissues and sclerotia, along with pathogenicity studies, led to the conclusion that the disease is caused by *Sclerotinia trifoliorum*. The fungus was not pathogenic on 6-month-old "DuPuits" alfalfa under the greenhouse or growth chamber conditions tested. That it was pathogenic, however, on four different clonal lines of crownvetch tested, was indicated. It is suggested that this disease could become serious during cool, wet seasons.

8002 Dean, C. E., and Clark, F. VEINBANDING ON TOBACCO IN NORTH FLORIDA. Plant Dis. Rep. 52(11):887-889. Nov. 1968. 1.9 P69P

Potato virus Y has been occurring on tobacco at the North Florida Experiment Station for several years. During 1967 and 1968, the virus was particularly severe on sun-grown plants, but symptoms were very light or nonexistent where plants were grown under the shade covering. This is the usual practice with cigar-wrapper tobacco plots. From such a center, it spread to other plants very quickly, even though aphid control seemed adequate. Symptoms included typical veinbanding, mottling of the leaf tips together with a general rough appearance, and necrotic spotting. In early stages of infection there was considerable stunting; however, the plants appeared to overcome this to a great extent in later stages of development. No attempt was made to evaluate the leaf quality of infected plants.

8003 Lownsbery, B. F., and others. RESPONSES TO POSTPLANTING AND PREPLANTING SOIL FUMIGATION IN CALIFORNIA PEACH, WALNUT, AND PRUNE ORCHARDS. Plant Dis. Rep. 52(11):890-894. Ref. Nov. 1968. 1.9 P69P

J. T. Mitchell, W. H. Hart, F. M. Charles, M. H. Gerds, and A. S. Greethead, joint authors.

A study of 37 orchard trials of nematocidal soil fumigants applied before and after planting peaches, walnuts, and prunes shows that a positive growth or yield response resulted from 9 of 11 (82%) of the preplanting applications; such a response was obtained in only 8 of 26 (31%) of the postplanting applications. Failure of the postplanting treatment (2.5 gallons 1,2-dibromo-3-chloropropane per acre) to reduce the populations of nematodes within roots to a less than limiting level is believed to be a principal cause of the low frequency of success.

Abstract, p.897.

8006 Stover, R. H., and Richardson, D. L. "PELIPITA", AN ABB BLUGGEOE-TYPE PLANTAIN [BANANAS] RESISTANT TO BACTERIAL AND FUSARIAL WILTS. Plant Dis. Rep. 52(11):901-903. Nov. 1968. 1.9 P69P

"Pelipita", and ABB Musa, is an important source of peasant and livestock food in Central America and many other tropical areas of the world. It is being destroyed by *Fusarium oxysporum* f. cubense Race 2 and an insect-transmitted strain of *Pseudomonas solanaceae*. A disease-resistant substitute for Bluggoe called "Pelipita" was detected in the Musa collection of the United Fruit Company in Honduras. Pelipita originated in the Philippine Islands and will eventually replace the disease-susceptible Bluggoe in the American tropics.

Bibliography, p. 7-8.  
Unripe processing tomatoes harvested by machine ripened to a satisfactory color during storage. Machine-harvested field-run lots ranging from mature-green to light-pink required about 10 days at 68° F. or 8 days at 77° for an 80 to 90 percent yield of ripe fruits. Machine-harvested mature-green fruits ripened faster than hand-harvested fruits. However, ethylene production by individual fruits was not influenced by method of harvest but only by stage of ripeness of the fruits. Treatment with ethylene (200 to 400 p.p.m.) for 2 to 4 days hastened the ripening of both mature-green and field-run tomatoes. However, its use would require reasonably airtight storage facilities, which would add to handling costs.  
The incidence of decay varied greatly among lots. It averaged about 13 percent in tomatoes held in jars; it was usually lower in tomatoes held in lugs.  
Salvage of 2 tons of initially unripe tomatoes per acre would yield about 300,000 tons of usable fruit with a farm value of \$6 million in California alone. This fruit is now wasted.

The preponderance of evidence to date indicates that there is no factorial relationship between oil recoveries by the Clevenger and the bromate methods. Although on careful operator might establish an additive relationship, the correlation would not apply among multiple operators. Reports from 15 laboratories indicate that the method is inherently precise and accurate, and is rapid and convenient to use. Principal precautions to be observed are (1) the small size of sample greatly increases the importance of exercising extreme care to make sure that the 25-ml. sample is representative, and (2) that proper ratios between alcohol, acid, water, indicator, and d-limonene be maintained by limiting the volume of distillate plus titrant to about 60-ml. (40-70 percent alcohol).
- It is planned that sufficient additional data will be obtained during the coming season, by formal collaboration of several laboratories, to justify requesting the Association of Official Analytical Chemists to adopt the bromate method as an Official Method for the determination of recoverable oil in citrus juice products.

Bibliography, p. 9.  
Potato chips fried at a high temperature (350° F.) have a lower oil content than chips fried at (300° F.), according to tests confirmed by the Red River Valley Potato Processing Laboratory, East Grand Forks, Minnesota. The lower viscosity of the hotter oil favors more complete drainage of oil from the finished chip. By one or more of several treatments, chip temperature is increased after emerging from the fryer resulting in a significant reduction in oil content. Flexibility of operation is improved, and economic savings may be realized in potato chip plants where oil costs per pound exceed potato solid costs per pound and in plants where reducing sugars cause use of lower frying temperatures. Less variability in oil content of product and greater plant output may also result.

8063 Chambliss, M. T. CAMEROON'S AGRICULTURAL ECONOMY IN BRIEF. U. S. D. A. Econ. Res. Serv. ERS- Foreign 215.8 p., map. Mar. 1968. A281.9 Ag83

Cameroon has an expanding economy which relies on both Government planning and free enterprise. Agricultural production, primarily of tropical products, accounts for 40 percent of the gross national product. Two-thirds of agricultural production is on a subsistence basis. Major cash crops are cocoa, coffee, bananas, cotton, peanuts, rubber, and oil palm products. The Government is encouraging the expansion and diversification of agricultural production.

Since Cameroon's main export crops are tropical, they do not compete with U.S. agricultural products. Coffee and cocoa are the major Cameroonian products purchased by the United States. In most years, rice and other grains and tobacco are the most important U.S. exports to Cameroon.

## FEDERAL EXTENSION SERVICE

8070 Kowalski, R. E. KEEPING IN TUNE WITH ENTOMOLOGY. Ext. Serv. Rev. 39(10):3. Oct. 1968. 1 Ex892Ex

In Iowa, as in many States, county Extension workers have had at most one course in entomology during their undergraduate days. In many cases, the course was taken 10 to 15 years ago.

Insect control procedures, as well as insect populations, have changed rapidly. In addition, the rapid increase in the educational levels of farmers is causing them to look for answers to more difficult and technical questions.

Recognizing these things, the entomology department at Iowa State University started an intensive short course in entomology for county and area Extension workers in the summer of 1967.

8071 Rosenkrans, D. B. REVIVAL MEETINGS—AGRICULTURE STYLE. Ext. Serv. Rev. 39(10):4-5. Oct. 1968. 1 Ex892Ex

8075 White, M. E., and King, H. D. SCA AND ETN PERMIT STATEWIDE MEETINGS WITHOUT TRAVEL. Ext. Serv. Rev. 39(10):12-13. Oct. 1968. 1 Ex892Ex

The county neighborhood "party line" of early telephone has taken a modern turn with University Extension in Wisconsin. And it has chosen a strong partner in the more recent "closed circuit" radio.

Today's users call the first ETN (for Educational Telephone Network) and the second SCA (for Subsidiary Communications Authority).

The networks tie the Madison campus to 205 receiving and sending installations throughout Wisconsin. With the system, administrators hold statewide staff conferences, specialists confer with agents, agents confer with each other, specialists train 4-H leaders, medical specialists present newest technology to physicians, nursing specialists do the same for RN's, teaching faculty present credit courses to high school home economics teachers, and independent study instructors hold individual conferences with students.

## FOREIGN AGRICULTURAL SERVICE

8077 Ioanes, R. A. A LOOK INTO THE PAST AND FUTURE OF U.S. RICE EXPORTS. Foreign Agr. 6(41):2-3. Oct. 7, 1968. A281.9 F76Fo

Administrator of Foreign Agricultural Service sees another good year ahead for U.S. rice exports but some increase in carryover stocks following a record U.S. rice crop in 1968.

8078 Baehr, H. A. AUSTRIA ADJUSTS SOFT WHEAT, RYE PRICES. Foreign Agr. 6(41):4. Oct. 7, 1968. A281.9 F76Fo

The second of two recent steps by the Austrian Government to curb domestic wheat production and to provide an incentive for farmers to grow more rye and feedgrains became effective on July 1, 1968. On that date the guaranteed producer price for soft wheat received by farmers was reduced by about 3 percent as of the beginning of the 1968-69 crop year, and the total producer price for rye was raised by about 2.5 percent. The earlier step was an increase in the gate prices for a number of important feedgrains late in 1967.

8079 Tetro, R. C. ITALY MOVES AHEAD WITH ITS GREEN PLAN. Foreign Agr. 6(41):6. Oct. 7, 1968. A281.9 F76Fo

Italy's agriculture midway through the second Green Plan (1965-67) shows progress accompanied by frustration, heated debate over farm policy on all levels, and the goal of EEC competition continuing to press for more and better agricultural production. In the broadest sense, Italian farmers have been pleased with the Green Plan and its workings since it was initiated in 1960. Green Plan II continues the same program, providing \$40 million for projects geared to the modernization of Italy's agriculture that is imperative, if Italy is to compete with its partners in the Common Market.

**8090** Missiaen, E. NATIONHOOD SET FOR EQUATORIAL GUINEA, KEY AFRICAN COCOA GROWER. Foreign Agr. 6(41):7-8. Oct. 7, 1968. A281.9 F76Fo

Includes coffee and lumber. Equatorial Guinea—one of Africa's smallest countries, but its fifth largest cocoa exporter—steps from its position as a Spanish colony to nationhood this Sunday, October 12. However, this political severance from Spain is not expected to affect the strong economic ties now existing between the two countries.

**8091** Schmittner, J. A. THE SUPPLY-DEMAND IMBALANCE OF SOYBEANS. Foreign Agr. 6(42):4-5. Oct. 14, 1968. A281.9 F76Fo

U. S. policy. Undersecretary of Agriculture discusses the world abundance of soybeans and the opportunities and responsibilities which fall on producing countries.

**8093** Cimianian, A. BETTER YIELDS BOOST ROMANIAN OILSEED CROPS. Foreign Agr. 6(42):7. Oct. 14, 1968. A281.9 F76Fo

Sunflower seeds. In recent years, Romania has made great strides in expanding its oilseed crops—gains which are largely the result of higher yields and are mirrored in a growing export trade.

**8094** Pelaez, E. FILIPINOS WORK FOR EFFICIENT COCONUT OIL INDUSTRY. Foreign Agr. 6(42):7. Oct. 14, 1968. A281.9 F76Fo

**8095** Wood, A. S. RECORD WORLD WHEAT CROP IN THE MAKING. Foreign Agr. 6(42):8. Oct. 14, 1968. A281.9 F76Fo

World production of breadgrains—wheat and rye—is moving toward a new record of 324 million metric tons this year, judging by crop information available in mid-September. Making up the record total is an expected 294-million-ton wheat crop and rye production estimated at 30.2 million tons.

**8096** Boulware, J. H. INDIA GIVES HIGHEST PRIORITY TO AGRICULTURE. Foreign Agr. 6(42):9-10. Oct. 14, 1968. A281.9 F76Fo

Some \$643.2 million, 20.6 percent of a total of \$3.1 billion, has been allocated for agricultural programs, community development, cooperation, irrigation, and flood control in the Annual Plan, 1968-69, presented to the Indian Parliament on August 1. In addition, finances have been provided in the industrial sector for production and supply of such agricultural inputs as fertilizers, pesticides, and agricultural implements. An outstanding feature of the new plan is the provision for an additional \$186.2 million for building up buffer stocks of foodgrains.

**8097** Dodson, J. C. NEW MARKETS FOR ARGENTINA'S COOKED-AND-FROZEN BEEF. Foreign Agr. 6(42):10. Oct. 14, 1968. A281.9 F76Fo

Japan and Canada have agreed to permit entry of cooked-and-frozen beef from Argentina, following a study of the product by both countries. Until now these countries have declined to import Argentine beef because of the foot-and-mouth disease problem. A factor in the negotiations that led to the two new outlets was Argentina's unfavorable balance of trade with both countries.

**8098** Larsen, M. R. MAINLAND CHINA'S AGRICULTURE SUFFERS SETBACK IN 1968. Foreign Agr. 6(43):2-5, map. Oct. 21, 1968. A281.9 F76Fo

Agricultural production in Mainland China in 1968 has checked and faltered following a substantial farm-produce upswing in 1967.

**8099** Lege, F. M. IN VIEW OF BUMPER CROP AUSTRALIAN FARMERS ACCEPT NEW WHEAT PROGRAM. Foreign Agr. 6(43):5. Oct. 21, 1968. A281.9 F76Fo

Australian farmers, after a month of dissent, have agreed to accept the controversial Wheat Stabilization Scheme that was put forward by their government in late August.

The program, which was endorsed reluctantly on September 19 by the Australian Wheatgrowers' Federation and now awaits approval by the legislatures of wheat-producing States, is to be in effect for 5 years, beginning with the 1968-69 season. On the whole, it reduces government payments to wheat producers by substantially lowering the guaranteed price for grain moving into export and by revamping the index used to calculate the price for grain sold on the home market.

**8090** De Verteuil, B. TRINIDAD AND TOBAGO: ONE NATION'S PROGRESS TOWARD FEEDING ITSELF. Foreign Agr. 6(43):6-8. Oct. 21, 1968. A281.9 F76Fo

Trinidad and Tobago, a tiny, two-island country of less than 1.3 million acres and slightly more than 1 million people, is taking great strides towards agricultural self-sufficiency. From an agricultural economy based primarily on growing sugar and tree crops for export, the country has expanded—in the 6 years since it became independent—into an active producer of meats, dairy products, food crops, fruits, and vegetables for domestic use. And tomorrow promises substantially greater gains.

How did this happen in so short a time? The answer lies in an ambitious farm program that has combined the resources and talents of government and private enterprise.

**8091** West, Q. M. AN EVALUATION OF WORLD FARM GAINS AND FOOD PROBLEMS. Foreign Agr. 6(44):2-5. Oct. 28, 1968. A281.9 F76Fo

New agricultural technology will have great impact on the world food situation—but it is not a magic wand that will solve all the problems of food-deficit countries. The United States and other major food exporters will continue to be called upon to help feed less-developed countries for a number of years.

**8092** West, Q. M. TRENDS IN WORLD GRAIN PRODUCTION AND TRADE. Foreign Agr. 6(44):5. Oct. 28, 1968. A281.9 F76Fo

Trends in long-term world grain and rice production and trade are of great importance to U. S. farmers and exporters and affect both farm income and the national economy. The United States has traditionally been the world's leading exporter in two out of three categories—wheat and coarse grains—and is now the chief exporter in the third—rice.

**8093** Harris, D. CURRENT TRENDS IN WORLD TRADE IN HIDES AND SKINS. Foreign Agr. 6(44):6. Oct. 28, 1968. A281.9 F76Fo

**8099** Scholz, W. L. BRITISH GRAIN PRODUCTION TO DECLINE THIS YEAR. Foreign Agr. 6(45):4. Nov. 4, 1968. A281.9 F76Fo

Rains this year have squelched Great Britain's chances of coming up with another record grain crop, and that country now faces a production nearly 10 percent off the 1967 record and far down the line as far as quality is concerned. In fact, so great are the losses in quality, that British millers may find it necessary to import as much as 1 million more tons of wheat.

- 9100** Lege, F. M. AUSTRALIA'S COTTON CROP; BIGGEST AND BEST EVER. Foreign Agr. 6 (45):5. Nov. 4, 1968. A281.9 F76Fo  
Cotton production in Australia during the 1967-68 season reached a new record of 149,727 bales, 77.6 percent above the 1966-67 crop. Larger plantings and exceptionally favorable weather during the second half of the growing period were mainly responsible. Warm and dry harvesting weather resulted in excellent grades, and the overall quality of the crop is considered the best yet achieved.
- 9101** Traeger, F. W. PHILIPPINE COPRA; PRODUCTION AND EXPORTS DROP. Foreign Agr. 6(45):10. Nov. 4, 1968. A281.9 F76Fo  
Philippine copra production in 1968 is expected to total about 1.2 million long tons, 15 percent less than in 1967, which in turn was 15 percent below the record 1966 level. During the first half of 1968, output was some 17 percent below the first half of 1967, but production in the second half should show substantial improvement.

- 9104** Kurth, T. COMBINATION HELITANKER-AIR TANKER ATTACK ON THE PINE CREEK FIRE. Fire Contr. Notes [Washington] 29(4):3-5, map. Fall 1968. 1 F766Fi  
A combined helitanker-air tanker attack can safely and effectively help control a forest fire if communication is constantly maintained between all aircraft and the ground and if operational procedures are followed. Excellent helicopter control can be maintained if all drop missions are directed by an Air Tanker Boss in a lead plane. These two points were demonstrated during the Pine Creek Fire of Aug. 9-11, 1967, on the Cleveland National Forest, Calif. The primary mission of the air tankers was to reduce fire intensity. Helitankers were assigned to specific targets that threatened to spot across or burn around retardant drops, to make the first attack on spot fires, and to support handline construction crews. An Air Tanker Boss in a T-34 lead plane directed all retardant drops.
- 9105** Boren, J. E. TRAINING PAYS OFF. Fire Contr. Notes [Washington] 29(4):5, 16. Fall 1968. 1 F766Fi  
Finding and prosecuting men who set forest fires.
- 9106** U. S. D. A. Forest Service. Division of Fire Control. AIR TANKER USE; A 5-YEAR APPRAISAL. Fire Contr. Notes [Washington] 29(4):6-7, 13. Fall 1968. 1 F766Fi  
More than 45 million gallons of water and fire-retarding chemical solutions has been dropped on forest fires by the Forest Service since its air tanker program was started about 12 years ago. A comparison of the National Forest protection area burned during this period with that of the previous 10 years shows a reduction of more than 20 percent. Certainly intensified prevention efforts and many improvements in equipment and techniques have contributed to this reduction. But it generally has been felt that air tankers have played an important role in effecting it.

- 9111** Jorgensen, R. N. STEAM BENDING OF HICKORY [CARYA]. Hickory Task Force. Rep. 11, 12 p. Ref. May 1968. A99.9 F7633  
At this time all evidence indicates that the hickory species are eminently satisfactory for producing bent-wood products after a plasticizing treatment with steam or hot water. Although inherent color, finishing characteristics, and other characteristics may make it desirable to select a particular wood, all eight of the species can be bent effectively by steaming.  
Care must be taken in seasoning the material before the bending process is started, because the hickories are dense hardwoods that are susceptible to the development drying defects. These defects will materially affect the bent-wood production. Because a considerable amount of hickory now available is low quality material, particular attention must be paid to the selection of the proper material to go into the bending process.

- 9113** McGee, C. E. NORTHERN RED OAK [QUERCUS RUBRA] SEEDLING GROWTH VARIES BY LIGHT INTENSITY AND SEED SOURCE. U. S. Forest Serv. Res. Note SE-90, 4 p. Mar. 1968. A99.9 F7623Un  
Northern red oak seedlings from each of three seed sources were subjected for one growing season to one of four intensities of light: full light, 70 percent light, 37 percent light, and 8 percent light. Seedlings grown in the open were taller than those grown in the shade and had more, generally heavier leaves. Height and leaf growth decreased as the amount of light reaching the plant decreased. Seed source, another important factor affecting growth, was related to height growth, number of leaves per seedling, acorn weight, and percent of multiple stems. Forty-one percent of the seedlings from one source had multiple stems, while only 11 percent and 4 percent of the seedlings from the other two sources had multiple stems.
- 9114** Schultz, R. P. SOIL OR FOLIAR FERTILIZATION OF WELL-DRAINED AND FLOODED SLASH PINE [PINUS ELLIOTTII ELLIOTTII] SEEDLINGS. U. S. Forest Serv. Res. Paper SE-32, 8 p. Apr. 1968. A99.9 F7623U  
Bibliography, p.8.  
One-year-old slash pine seedlings were grown for 9 months under two soil-moisture and four N + P fertilization treatments. Flooding increased seedling mortality and decreased growth. Foliar fertilized seedlings did not grow better than unfertilized seedlings either under well-drained or flooded conditions. Under well-drained conditions, seedlings receiving soil fertilization or foliar plus soil fertilization had more than double the dry-weight increment and one-quarter more height growth than unfertilized seedlings. Under flooded conditions, soil fertilization or foliar plus soil fertilization did not increase height growth but increased dry-weight increment by 40 to 50 percent over unfertilized seedlings.
- 9115** Blackmarr, W. H. SEASONAL AND DIURNAL VARIATION IN MOISTURE CONTENT OF SIX SPECIES OF POCOSIN SHRUBS. U. S. Forest Serv. Res. Paper SE-33, 11 p. Apr. 1968. A99.9 F7623U  
Indication of forest fire danger.  
Seasonal variation in the moisture content of six species of pocosin shrubs was observed over a 10-month period during 1965. The variation in the moisture content of the foliage and stems is compared with the average moisture content of the whole plant.  
Moisture contents of both stems and foliage reached their lowest levels during the fall and early spring. The moisture content of most species increased rapidly throughout May, reaching a maximum during the first 2 weeks of June. The initiation of new foliage occurred at about the same time that the average moisture content of the whole plant began its rapid spring buildup.  
Diurnal variation in the moisture content of the foliage of four shrub species was observed over a 36-hour period during June 21 and 22, 1965.  
The moisture content of newly developed foliage exhibited noticeable diurnal fluctuation. Maximum moisture contents occurred between 2 and 6 a.m. Minimum moisture contents occurred between 2 and 6 p.m.

8116 Taras, M. A., and Sancier, J. R. WOOD DENSITY SURVEYS OF THE MINOR SPECIES OF YELLOW PINE IN THE EASTERN UNITED STATES. I. SPRUCE PINE (*Pinus glabra* Walt.). U. S. Forest Serv. Res. Paper SE-34, 15 p. Apr. 1968. A99.9 F7623U Spruce pine (*Pinus glabra* Walt.) was sampled over its entire range at 35 different locations. Specific gravity was determined on increment cores in an extracted condition. Tree-increment core specific gravity relations were examined, and equations for predicting tree specific gravity developed. Geographic variation in the specific gravity of spruce pine is discussed.

8117 Bennett, F. A. MULTIPLE-PRODUCT YIELD ESTIMATES FOR UNTHINNED SLASH PINE PLANTATIONS; PULPWOOD, SAWTIMBER, GUM. U. S. Forest Serv. Res. Paper SE-35, 21 p. Apr. 1968. A99.9 F7623U

If the objective of forest management is to maximize cash returns, the forest manager must be able to determine the optimum density and rotation age; these determinations require techniques for predicting multiple-product yields for various age-site-density schedules. This paper presents multiple-product yield estimates for slash pine plantations that were obtained by constructing a family of frequency curves that define the relative proportion of trees in each diameter class as a function of age, site, and density. Included are estimates of board-foot, pulpwood, and gum yields, singly and in combination. Returns for single products and the various combinations of products are also included.

# STATE AGRICULTURAL EXPERIMENT STATION PUBLICATIONS

Publications issued by the State Agricultural Experiment Stations are usually available from the issuing experiment station, except where noted, and as long as the supply lasts. The National Agricultural Library does not distribute them.

Reproductions of material not available from the various State institutions may be ordered at regular Library rates from the United States Department of Agriculture, National Agricultural Library, Photoduplication Section, Washington, D.C., 20250.

## Alabama Agricultural Experiment Station, Auburn

- 8147 Stevenson, R. E. AN ERA ENDS; KENNETH B. ROY, ORIGINATING EDITOR OF HIGHLIGHTS JOINS RETIRED RANKS. *Highlights Agr. Res. [Ala. Sta.]* 15(3):3. Fall 1968. 100 ALIH
- 8148 King, C. C., Smith, L. A., and Grimes, H. W. ESTABLISHMENT AND MAINTENANCE OF LADINO WHITE CLOVER IN THE BLACK BELT. *Highlights Agr. Res. [Ala. Sta.]* 15(3):4. Fall 1968. 100 ALIH
- 8149 Orr, H. P., and Bryce, H. NATIVE PLANTS PROMISING FOR ROADSIDE LANDSCAPING. *Highlights Agr. Res. [Ala. Sta.]* 15(3):5. Fall 1968. 100 ALIH
- 8150 Hurst, J. R. MARKETING FACILITIES FOR ALABAMA SOYBEANS. *Highlights Agr. Res. [Ala. Sta.]* 15(3):6, map. Fall 1968. 100 ALIH  
Increasing processing facilities to increase state markets.
- 8151 Cottier, G. J., and others. EFFECT OF CONTINUOUS FEEDING OF AFLATOXIN TO CHICKENS. *Highlights Agr. Res. [Ala. Sta.]* 15(3):7. Fall 1968. 100 ALIH  
C. H. Moore, U. L. Diener, and N. D. Davis, joint authors.  
From *Aspergillus flavus*-contaminated corn meal.
- 8152 Harris, R. R., Boseck, J. K., and Anthony, W. B. EFFICIENT GROWTH MADE BY CALVES ON RYE-RYEGRASS PASTURES. *Highlights Agr. Res. [Ala. Sta.]* 15(3):8. Fall 1968. 100 ALIH
- 8153 Hiltbold, A. E., and Buchanan, G. A. CAN HERBICIDES BE USED SAFELY EVERY YEAR? *Highlights Agr. Res. [Ala. Sta.]* 15(3):9. Fall 1968. 100 ALIH  
Residues injure field crops.
- 8154 Davis, T. C., and Goggans, J. FUSIFORM RUST IN SOUTHERN PINES. *Highlights Agr. Res. [Ala. Sta.]* 15(3):10. Fall 1968. 100 ALIH  
Caused by *Cronartium fusiforme*.
- 8155 Miller, B. R., and Strain, C. E. EFFECTS OF ADVERTISING PASTEURIZED REFRIGERATED PEACHES. *Highlights Agr. Res. [Ala. Sta.]* 15(3):11. Fall 1968. 100 ALIH
- 8156 Cannon, R. Y., and Roy, D. D. RAW MILK QUALITY AFFECTS PASTEURIZED MILK. *Highlights Agr. Res. [Ala. Sta.]* 15(3):12. Fall 1968. 100 ALIH
- 8157 Hurst, J. R., and Miller, B. R. PRICE MAPPING DETERMINES GRAIN FOR ECONOMIC FEEDING; RELATIVE PRICES OF SUBSTITUTABLE GRAINS IDENTIFIES MOST PROFITABLE RATION INGREDIENTS. *Highlights Agr. Res. [Ala. Sta.]* 15(3):15. Fall 1968. 100 ALIH
- 8158 Anthony, W. B., and Cunningham, J. P. LIQUID GOLD FEEDING SYSTEM. *Highlights Agr. Res. [Ala. Sta.]* 15(3):16. Fall 1968. 100 ALIH  
Liquid formulas for beef cattle.

- 8159 Canerday, T. D., and Dilbeck, J. D. THE PICKLEWORM [DIAPHANIA NITIDALIS]; ITS CONTROL ON CUCURBITS IN ALABAMA. *Ala. Agr. Exp. Sta. Bull.* 381, 27 p. Sept. 1968. 100 ALIS
- 8160 Teem, D. 1968 SMALL GRAIN VARIETY REPORT. *Ala. Agr. Exp. Sta. Circ.* 162, 22 p. Sept. 1968. 100 ALIS
- 8161 Canerday, T. D., and Arant, F. S. CONTROL OF CATERPILLARS ATTACKING CABBAGE. *Ala. Agr. Exp. Sta. Circ.* 163, 18 p. Sept. 1968. 100 ALIS
- 8162 Buchanan, G. A., Evans, E. M., and Dumas, W. T. DEFOLIATION, DESICCATION, AND REGROWTH INHIBITION OF COTTON. *Ala. Agr. Exp. Sta. Leaflet* 77, 6 p.-folder. Sept. 1968. 100 ALIS  
Injuries to bolls caused by chemical defoliation.

## Arizona Agricultural Experiment Station, Tucson

- 8163 Sheldon, J. J. PRECONDITIONING RANGE CALVES FOR THE FEEDLOT. *Progr. Agr. Ariz.* 20(4):8-9. July/Aug. 1968. 6 P9452  
Chiefly disease prevention.
- 8164 Marcello, J. A., and Dryden, F. D. MEAT QUALITY IS DEFINED. *Progr. Agr. Ariz.* 20(4):14-15. July/Aug. 1968. 6 P9452
- 8165 Myers, H. E. THE FUTURE OF THE COLLEGE OF AGRICULTURE. *Progr. Agr. Ariz.* 20(4):21-24. July/Aug. 1968. 6 P9452  
Arizona University.

## Arkansas Agricultural Experiment Station, Fayetteville

- 8166 Phillips, J. R., Lincoln, C., and Holloway, R. L. MOVEMENT OF ADULT BOLLWORMS [HELIOTHIS ZEA] IN ARKANSAS. *Ark. Farm Res.* 17(4):2, map. July/Aug. 1968. 100 Ar42F  
Overwintering.
- 8167 Noland, P. R., and Byler, B. WAYS OF CONTROLLING ANEMIA IN YOUNG PIGS COMPARED. *Ark. Farm Res.* 17(4):3. July/Aug. 1968. 100 Ar42F
- 8168 Jackson, H., and May, R. D. MARKETS FOR ARKANSAS FEEDER CATTLE. *Ark. Farm Res.* 17(4):4, map. July/Aug. 1968. 100 Ar42F
- 8169 Stuart, C., and Morrison, W. R. ECONOMIES OF SIZE IN SOYBEAN PROCESSING PLANTS. *Ark. Farm Res.* 17(4):5. July/Aug. 1968. 100 Ar42F
- 8170 Horton, O. H. VARYING THE AMOUNT OF CONCENTRATES FED TO GROWING DAIRY HEIFERS. *Ark. Farm Res.* 17(4):6. July/Aug. 1968. 100 Ar42F
- 8171 Hileman, L. H., Spooner, A. E., and Ray, M. L. RESULTS OF PASTURE FERTILIZATION AS SHOWN BY CHANGES IN SOIL TESTS. *Ark. Farm Res.* 17(4):7. July/Aug. 1968. 100 Ar42F  
*Cynodon dactylon*.
- 8172 Smith, R. L., and Hinkle, D. A. WINTER HARDINESS AND ADAPTABILITY OF MEXICAN DWARF WHEATS TO ARKANSAS. *Ark. Farm Res.* 17(4):9. July/Aug. 1968. 100 Ar42F
- 8173 Rom, R. C., and Arrington, E. H. FACTORS AFFECTING THE COLOR OF BABYGOLD-5 PEACHES. *Ark. Farm Res.* 17(4):10. July/Aug. 1968. 100 Ar42F
- 8174 Sistrunk, W. A., and Cash, J. N. CHANGES IN QUALITY OF FROZEN SUMMER SQUASH. *Ark. Farm Res.* 17(4):11. July/Aug. 1968. 100 Ar42F  
Affected by pre-freezing processing.
- 8175 Goode, M. J. WATERMELON ANTHRACNOSE: AN OLD PROBLEM RETURNS. *Ark. Farm Res.* 17(4):12. July/Aug. 1968. 100 Ar42F  
Caused by *Glomerella cingulata* orbicularis.

8176 White, J. H. MAINTAINING FARM INCOME WITH ALTERNATIVE COTTON [ACREAGE] ALLOTMENTS AND PRICE LEVELS. Ark. Farm Res. 17 (5):2. Sept./Oct. 1968. 100 Ar42F

8177 Moosberg, C. A. ARKANSAS 61-28, A NEW COTTON VARIETY. Ark. Farm Res. 17(5):3. Sept./Oct. 1968. 100 Ar42F  
Yields.

8178 Smith, R. L., Jones, J. P., and Clement, E. L. PERFORMANCE OF WHEAT VARIETIES IN 1967 AND 1968. Ark. Farm Res. 17(5):4. Sept./Oct. 1968. 100 Ar42F

8179 Offutt, M. S. KOREAN LESPEDEZA [STIPULACEA] PERFORMANCE AS AFFECTED BY SEED SOURCE. Ark. Farm Res. 17(5):5. Sept./Oct. 1968. 100 Ar42F

8190 Ferguson, J. A. USE OF IRRIGATION WATER IN MONROE COUNTY. Ark. Farm Res. 17(5):6. Sept./Oct. 1968. 100 Ar42F  
Field crops.

8181 Martin, G., and Morrison, W. R. THE CHANGING SEASONAL PATTERN OF SOYBEAN PRICES IN ARKANSAS. Ark. Farm Res. 17(5):7. Sept./Oct. 1968. 100 Ar42F

8192 McFerran, J., and Vose, H. H. GREENHOUSE TOMATO TRIALS, 1966 TO 1968. Ark. Farm Res. 17(5):8. Sept./Oct. 1968. 100 Ar42F  
Variety and hybrid yields.

8183 Goode, M. J., McFerran, J., and Vose, H. H. CLADOSPORIUM [FULVUM] LEAF MOLD CONTROL ON GREENHOUSE TOMATOES. Ark. Farm Res. 17(5):9. Sept./Oct. 1968. 100 Ar42F  
Chemical.

8184 Riggs, R. D., Slack, D. A., and Hamblen, M. B. NEW BIOTYPE OF SOYBEAN CYST NEMATODE [HETERODERA GLYCINES]. Ark. Farm Res. 17 (5):11. Sept./Oct. 1968. 100 Ar42F  
No varietal resistance to new biotype.

8185 Andrews, L. D. HATCHABILITY AS RELATED TO CERTAIN CHARACTERISTICS OF TURKEY EGGS. Ark. Farm Res. 17(5):12. Sept./Oct. 1968. 100 Ar42F

North Central Region

- 8329 Skrdla, W. H., and others. HORTICULTURAL CHARACTERS AND REACTION TO TWO DISEASES OF THE WORLD COLLECTION OF THE GENUS LYCOPERSICON. Ohio. Agr. Res. Develop. Center. Res. Bull. 1009, 110 p. Apr. 1968. 100 Oh3S  
L. J. Alexander, G. Oakes, and A. F. Dodge, joint authors.  
Agricultural Experiment Stations of Alaska, Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, South Dakota, and Wisconsin; and U. S. Department of Agriculture, cooperating.  
Also North Central Regional Research Publication No. 172.  
Alternaria solani and tobacco mosaic resistance, and physiological characteristics important for cultivation.

STATE AGRICULTURAL EXTENSION SERVICE  
PUBLICATIONS

Publications issued by the State Agricultural Extension Service are usually available from the issuing extension service, except where noted, and as long as the supply lasts. The National Agricultural Library does not distribute them.

Reproductions of material not available from the various State institutions may be ordered at regular Library rates from the United States Department of Agriculture, National Agricultural Library, Photoduplication Section, Washington, D.C., 20250.
